Readme.txt File for CD Player for Windows v 1.0.

INTRODUCTION:

Thank you for choosing CD Player for Windows. CD Player is distributed in two testware forms:

The first, the larger of the two, contains all files, including VBRUN100.DLL, and a complete setup program. This larger file is approximately 314,000 bytes long in its zipped mode (due to size of VBRUN).

The second, is much smaller as it contains only those files needed to execute the program and its help file. The second file assumes that the user has knowledge of both DOS and Windows, and can easily place the necessary files where they belong, by following the instructions here in this file.

The second file was created primarily to speed up download transfers for those who had a working knowledge of their Windows system. This file is approximately 114,000 bytes long.

If you have downloaded or acquired the condensed version of the zip, please follow the instructions below for installation.

FOR USERS WITH THE SMALL ZIPPED VERSION (5 Files):

We assume that you know enough about directory trees and structures that you will be able to carry the following out,...

If you don't have VBRUN100.DLL, you must acquire it from either a friend, or a service like CompuServe. VBRUN100.DLL should be located in your Windows directory.

The files included in this zip are:

CDPLAYER.EXE (Program File)
CDPLAYER.HLP (The CD Player Windows Help File)
MCI.VBX
PICCLIP.VBX
README.TXT (This File!)

Copy "Picclip.vbx" and "Mci.vbx" to your Windows\System directory. The other three files, CDPLAYER.EXE, CDPLAYER.HLP, and README.TXT can be put in any subdirectory you like.

That's all there is to it. Just add it to one of your

Program Manager groups, and you're ready to go!

FOR USERS WITH THE LARGE ZIPPED VERSION (11 Files):

This zip file contains all software necessary to do a regular Windows setup. Unzip the file to a clean diskette. This can be either a 3.5 " 720 or 1.44 MB disk, or a High Density 5.25" Floppy. All necessary files WILL NOT FIT ON A Double Sided/Double Density 5.25" diskette.

Or, you can unzip the files to a clean directory on your hard disk drive.

The files contained in this zip are:

SETUP.EXE (Setup program)
SETUP1.EXE (Support program for Setup)
SETUPKIT.DL_ (Support file for Setup)
VBRUN100.DL_ (Runtime Module)
VER.DL_ (Version Checking Library)
SETUP.LST (Support File for Setup)
CDPLAYER.EXE (The Player Program)
CDPLAYER.HLP (CD Player's Help File)
MCI.VBX (Necessary DLL)
PICCLIP.VBX (Necessary DLL)
README.TXT (This Readme File!)

To install CD Player for Windows, go to the File or Program Manager, choose the file menu, then the Run menu option. When the program prompts you for the file name to run, type in either...

A:\setup (if your setting up from the "A" floppy drive)

B:\setup (if you are installing from a "B" floppy drive)

or...

(DriveLetter) :\ (DirectoryName) \setup (if you unzipped to a hard disk directory.

Then follow the prompts as they come along. Setup will walk you through the installation, step by step. All defaults have been set for you, so if you're satisfied with the choices that are presented, follow the instructions in the setup program.

LIMITATIONS:

CD Player, before it's registered, has one restriction. The program will only allow you to save 4 cataloged CD's. Of course, this limitation, as well as the start up screen, will be eliminated upon registration.

Another limitation, purposely inserted, is that ANY version of CD Player for Windows, regardless of whether or not it's registered, can only save 20 selected track for each CD.

REGISTRATION:

You can register the basic program by printing the registration form from the intro screen, filling it out, and sending it with your payment of \$24.95 for just the registration, or \$42.95 if you want the complete version with manual per registration (NY State residents please add sales tax) to:

CD Player Registration
Graphical Bytes, Inc.
P.O. Box 2
Southampton, NY 11969-0002

Soon after you will receive a letter with your registration information. If you so desire, we can provide this for you on CompuServe, but please indicate this on your registration form.

At this time, we do not accept credit cards. Registered users will receive upgrade announcements as soon as upgrades are available.
