

Installation Instructions for
EMail Assist for CSNav v1.05
Copyright © 1996 Rhino Bytes LLC

Thank you for trying EMail Assist for CSNav! EMail Assist for CSNav is an add in program for CompuServe Navigator for Windows. It adds three major features to CSNav: spell checking, quoting, and user-defined macros, called signatures.

To run EMail Assist, you need a 286 or better, Windows 3.1 or greater, and CSNav 1.1.1. EACSN 1.05 will not work with pre-1.1.1 versions of CSNav and may not work with post-1.1.1 versions. To find out which version of CSNav you have, run CSNav and display the about box by choosing the menu item Help|About CSNav... If you are using an older version of CSNav, please upgrade to version 1.1.1 before running EACSN. (You can do this free of charge - GO CSNAV.) If you are using a version of CSNav after 1.1.1, you may wish to update your version of EACSN before running it. The latest version of EACSN can always be found in the free CSNAVSUPPORT forum.

To install EMail Assist, simply run the INSTALL.EXE program. You may run it from the distribution diskette or from a temporary directory into which you have unzipped the files. The important thing is that INSTALL.EXE and INSTALL.DAT must be in the same directory.

If you also use EMail Assist for WinCIM, you may wish to install EACSN into your EAWC directory. Doing so will allow you to use the same private dictionary and signatures, and will save you some disk space on duplicate files. However, you must have EAWC 1.05 to run it from the same directory as EACSN 1.05. If you have have an older version, you should download this newer version from the WCIMGENERAL forum, which is a free forum, and install it before or just after running the install program for EACSN.

After installing, just double-click the EMail Assist icon in Program Manager. Do not run EMail Assist while CSNav is already running. You will find extensive instructions and information on EMail Assist in the online help file.

If you are unable to install EMail Assist, please contact Rhino Bytes at our technical support CIS address, 73777,3273.
