

GIZMO ver 2.0 (Requires VBRUN300.DLL)

Unzip the file "**GIZMO.ZIP**" to the directory of your choice on any fixed drive. After the files are unzipped, you should have the following files on your hard drive.

DEFAULT.CFG
EXAMPLE1.CFG
EXAMPLE1.DAT
CDROM.CFG
CDROM.DAT
COMMDLG.DLL
VER.DLL
GIZMO.EXE
CMDIALOG.VBX
INSTALL.WRI
GIZMODOCS.WRI
REGISTER.WRI

The **.VBX** and the **.DLL** files should be copied to your **WINDOWS/SYSTEM** directory. If you program with **VB** or use other programs written in **VB** then you probably already have these files on your system.

The rest of the files can be copied to any directory you choose, as long as all are copied to the same directory.
