[Don't?](#)

[Copyright Information](#)

Command Level Restrictions:

Command Level Restrictions simply allow you to modify how many commands can be accessed by a Windows user. You can disable the following features:

- The **Run** command under the file menu.

- The **Exit Windows** Command

- The **File** Menu

- The **Save Settings on Exit** Option

Program Level Restrictions:

Program Level restrictions refer to the editing access of the user. There are five levels of editing restriction:

- 1 - No restriction level
- 2 - Disables the ability to create and edit Program Manager Groups
- 3 - Disables the ability to create and edit Program Manager Items
- 4 - Disables the ability to edit a Program Item's Command Line
- 5 - Disables all editing functions

Program Restriction Level's 2 - 5 are not enabled in the unregistered version. To register WinProtect 2.0, [click here.](#)

Registering WinProtect 2.0

Name
Street Address
City, State Zip
Computer Type
Indicate whether you would like to be on our mailing list

* If applying for a site license, please state the nature of your business or organization if applicable.

Copyright Information

WinProtect 2.0 ©1995 by SchultEch Software
All Rights Reserved.

You may distribute the shareware version of this program as long as those who use it agree to register it if they feel satisfied with it. The shareware version is the version which does not allow access to the last four Program Level Restrictions. You may NOT distribute the commercial version of this program. The commercial version allows unlimited access to all features. If you use this program for more than 21 days, you must either delete it, or register it.

What does WinProtect have that other programs don't?

WinProtect uses a special encryption algorithm that very few shareware protection programs use. Instead of storing your password in plain view (able to be cracked by any knowledgeable hacker), WinProtect stores your password encrypted so there's no way anyone could decipher it (unless they had, say, five Super-Computers).
