The Concept of Forms to HTML

Ok, These are the only things you will see on the HTML Page:

- * Label
- * TextBox
- * PictureBox
- * Image
- * Line

These are the properties that are used to create the HTML Page:

- * Alignment (Label only)
- * Caption (Label Only) - (Plus the Form's Caption is the Document Title.)
- * Text (TextBox Only)
- * Top (All But The Line)
- * Y1 (Line Only)

The PictureBox is a linked image, and the Image is just a image. The HTML Page does not show the actual picture, it is just a place holder for the picture.

The TextBox is a Fixed Width Font. Like `<CODE></CODE>`.

The Reasoning Behind this program is to whip up a HTML document really fast.
