

With face factory you can design anyone you know - your family, friends and work colleagues - or create a face using your own imagination.

face factory allows you to create faces by making selections from a group of tabs containing lists of ready-made facial features such as eyes, noses, mouths etc. To add a feature to your face, simply drag the feature from its relevant tab and position it anywhere in the design area. It's so simple.

Your version of face factory may have variations within the Feature tabs, i.e., you may have more or less tabs or more or less clipart contained within those tabs. This will have no bearing on any part of this Help, including the illustrations shown, as all Feature tabs work in exactly the same way. If the Help mentions a specific feature or group of features, use a different feature or group of features appropriate to your version.

Keep adding features to your face until it's complete. If you don't like a particular feature, just replace it by dragging another feature from the same tab into the design area.

face factory replaces the old feature with the new feature - it couldn't be easier.

Once all features are in position, you can transform them easily by rotating and reflecting, skewing, resizing, colouring and changing their position.

If you make a mistake, just use the undo and redo commands to rectify it. Once you've created a face, save it as a face file (.FAC). You can then print your face directly from face factory.

If you want to use your face in other programs, you can export it as a (.WMF), (.CGM) or (.GEM) file, probably three of the most catered for graphics formats. If you prefer, you can copy and paste the face or drag-and-drop it into the program window.

{button ,KL('face factory')}}Related Topics

Once you've created your face using face factory, you can use it in your other Windows programs, eg. your graphics or DTP programs.

- If you've got greenstreet Draw on your machine, you can copy your face from the face factory design area and paste it into the greenstreet Draw window. You can then edit the face in the same way that you would any (.ART) file.
- If you've got a graphics or DTP program that support the (.WMF), (.CGM) or (.GEM) graphics formats, you can export your face from face factory in one of these formats and import the face into your desired program.

Lets you move faces to different programs or individual features into the design area. Click and hold down the left mouse button while you drag the face or feature to the position you want. To position the face or feature, release the button.

- You can also display features in the design area by double-clicking on the feature.

A bar that appears at the bottom and/or right edge of a window whose contents are not entirely visible.

A list of available commands and actions in face factory. Menu names are displayed in the menu bar near the top of the face factory window.

A temporary holding place for a face that has been copied.

A window used to supply information to face factory. When a dialog box is displayed, all interaction with face factory must be through the dialog box.

Part of a structure for organising your files on a disk. A folder can contain files and other folders called *subfolders*.

A face stored on hard or floppy disk, or other media.

A key or key combination that you press to carry out a command or action. If a menu command has a keyboard shortcut, the key combination is listed to the right of the command name in the menu.

To save a picture onto the Windows Clipboard, without removing it from the face factory design area, so that it can be transferred to another location.

To save the face as a (.WMF), (.CGM) or (.GEM) file that can then be loaded into your other programs, e.g. greenstreet Draw.

The horizontal bar displaying the names of face factory's menus. It is displayed below the title bar.

A number of tools that you can use to create or edit your face.

A bar at the foot of the face factory window giving you hints and tips as you work.

A standard Windows menu displayed by clicking on the icon at the top left of a window. By using **Control** menu commands you can restore, move, size, minimise, maximise and close the window.

The white area to the right of the Feature tabs where the face is displayed.

A selection of features in the design area.

Small boxes displayed around a selected feature. Handles can be dragged to change the size or shape of the feature.

A component of a face e.g. eyes, nose, mouth etc.

Rotating a feature using the rotate buttons in the toolbar.

Reflecting a feature using the reflect buttons in the toolbar.

Skewing a feature using the skew buttons in the toolbar.

The feature tabs are positioned on the left of the face factory desktop. Each tab has an icon heading relevant to the type of facial features that can be found on the tab card below.

Your version may have variations within the Feature tabs, i.e., you may have more or less tabs or more or less clipart contained within those tabs.

Howto

Work with faces

1. From the **File** menu, select **Open**. The **Open dialog box** appears.
2. From the **Look in** drop-down list box, select the disk drive and folder where the face is saved. The contents of the last used folder are shown by default.
3. From the Folders list box, select the face you want to open, then click on **Open**.

After a short time the selected face appears in the face factory design area.

Note:

If there are any unsaved changes to the current face, a message appears asking if you want to save the changes. Click on **Yes**, **No** or **Cancel** as appropriate.

If you select **Yes**, the **Save As** dialog box appears for you to save your face.

Keyboard shortcut: Ctrl+O

{button .KL('faces')} Related Topics

A list of recently used faces can be found in the **File** menu directly above the **Exit** command.

► From the **File** menu, select the filename of the face you want to open. The face appears in the design area.

Note:

If there are any unsaved changes to the current face, a message appears asking if you want to save the changes. Click on **Yes**, **No** or **Cancel** as appropriate.

If you select **Yes**, the **Save As** dialog box appears for you to save your face.

{button ,KL('faces')} Related Topics

1. From the **File** menu, select **New**. A new untitled face opens within the design area.
2. Create your new face.

Save the face so it can be re-opened for use at a later time.

Note:

If there are any unsaved changes to the current face, a message appears asking if you want to save the changes. Click on **Yes**, **No** or **Cancel** as appropriate.

If you select **Yes**, the **Save As** dialog box appears for you to save your face.

Create faces

► To bring the required tab into view, simply click on the top of the tab. The features contained within that tab are displayed on the tab card.

Note:

Your version may have variations within the Feature tabs, i.e., you may have more or less tabs or more, or less clipart contained within those tabs.

{button .KL('selecting')} Related Topics

1. With the required tab in view, click and hold the mouse button down on the feature and drag it into the design area.
2. Release the mouse button.

The feature is added to the existing features of the face. If **Snap to Position** is selected in the **Options** menu, the feature is dropped in its default facial position. If **Snap to Position** is turned off, the feature is dropped at the current mouse pointer position.

Note:

- If you have already added this type of feature to your face, the new feature replaces the existing feature. (This does not apply to features taken from the **Accessories** tab).
- In addition to dragging a feature into the design area, you can double-click on a feature to add it to your current face. The feature appears in its default position, whether or not **Snap to Position** is selected from the **Options** menu.
- Your version may have variations within the Feature tabs, i.e., you may have more or less tabs, or more or less clipart contained within those tabs.

{button .KL('selecting')} Related Topics

To select an individual feature from within the design area, simply click on the feature. The selected feature is surrounded by a frame indicating that it is selected.

To select all of the features within the design area, select **Select All** from the **Edit** menu. All features are surrounded by their respective frames indicating that they are selected.

To select some of the features within the design area, **Shift+Click** on the individual features you want to select. A selection frame is drawn around the selected features.

You can also select some features by dragging the mouse pointer diagonally over the features you want to select. A selection frame appears as you drag and the features within are selected when you release the mouse button.

You need to select a feature(s) to resize, rotate, or skew them etc.

Keyboard shortcut: Select All - Ctrl+A

[Related Topics](#)

1. Select the feature(s) you want to move.
2. When the pointer changes shape to an arrow with a selected rectangle at its base, press the mouse button and drag the feature(s) to its new position. As you drag the feature(s), an outline of its new position is displayed.
3. Release the mouse button to redraw the feature(s) in its new position.

You can also move feature(s) using the **Nudge control** or cursor keys.

[{button ,KL\(`design area'\)}](#) [Related Topics](#)

1. Select the feature(s) you want to delete.
 2. From the **Edit** menu, select **Delete**.
- You can also delete any feature(s) using the **Delete** key.

{button ,KL(`design area')} Related Topics

1. Select the feature in the design area you want to change.
2. With the same tab in view, click on another feature to select it. The feature is highlighted.
3. Either double-click on the highlighted feature, or click and hold down the mouse button and drag it into the design area.
4. Release the mouse button.

The feature replaces the existing feature you selected at step 1.

Note:

- Because a face can include multiple accessory features, you are not able to change selected features that originate from the **Accessories** tab using this method. Instead, the accessory feature is added to the face without overwriting the existing feature.
- Your version may have variations within the Feature tabs, i.e., you may have more or less tabs, or more or less clipart contained within those tabs.

{button ,KL('design area')} Related Topics

- ▶ From the **Edit** menu, select **Undo** or **Redo**. The last action is undone, or the previous undo command is redone.

Note:

- ▶ You cannot undo commands that do not change your faces' content, e.g. opening a face, scrolling the window, or making selections on a dialog box.
- ▶ You can only redo a command immediately after it has been undone.

Shortcuts:

Edit faces

1. Click and hold down the right mouse button (to change the line colour), or the left mouse button (to change the fill colour) on the colour you want in the colour bar.
2. Drag the mouse pointer into the design area. The pointer changes to a paint pot.
3. Position the paint pot over a feature. Parts of the feature are highlighted with selection handles.
4. With the chosen part highlighted. Release the mouse button.

The line or fill colour of the selected feature is changed.

{button ,KL('colour')} Related Topics
