14 System WAV files optimized in 16bit stereo sound at 11

1 ReadMe Word Document (This file you are reading ☺)

1 LogoReadMe Text File

1 Font ReadMe Text File

1 ReadMe Text File

Folder Name: Apple Mac OS

Group Name: Mac

Quick Install: Unzips to create necessary directories unzip to a temp then move extracted files to the corresponding directories in your plus! dir. (Or just unzip to "c:\" and your winzip will do the rest.)

Special Note: This theme is not complete without a functioning Mac OS application toolbar similar to the windows startbar. This functioning toolbar can be downloaded from: <http://home.hkstar.com/~ritchie/winmac.html>
With the Mac tool bar in use, you can put the windows toolbar on autohide and use the Mac toolbar!

Other Themes: Eternal SailorMoon, SailorMars, SailorJupiter, SailorStarS
Buffy The Vampire Slayer, WonderWoman, ThunderCats, Beasties and
Riven The Sequel to Myst.

DETAILED INSTALLATION:

- 1) Open the ApIMacOS.ZIP file in WinZip.
- 2) Click on the EXTRACT button.
- 3) This will open the Extract Window. In the "Extract To:" box, type "C:\\" (no quotation marks). This will extract the files to the proper destination automatically. It will not extract the files to your root directory if you have followed these instructions correctly. If you have not followed the instructions carefully all the contents of the zip file will end up in your root directory.
- 4) Check "Overwrite Existing Files" and "Use Folder Names". (This is not really necessary but it will insure that if your zip is an upgrade to a previous theme that the new files will replace the older ones. So just do it 😊).
- 5) Click on the "Extract" button. This will automatically create a Apple Macintosh OS directory in your themes directory and extract the files there.
- 6) Load the theme with the Desktop Themes program.

*If this theme has StartUp and Shutdown Logos read the following for their installation, if your theme doesn't have any Logos, skip this:

Apple Mac OS Shutdown and startup images:

Instructions:

When the ApIMacOS.ZIP file contents are extracted the 3 Logo images will automatically be placed in the following:

Mac Logo.sys - C:\
Mac LogoW.sys - C:\Windows
Mac LogoS.sys - C:\Windows

NOTE If you are looking in C:\ or C:\Windows and don't see any ".SYS"

files it is probably because you need to set your windows explorer to "view all files (and file extensions)." To do this simply go to "view" in windows explorer, then select "options" then click the "show all files" and if you need to, uncheck "hide msdos file extensions..." And put these settings back when you are done installing your logos! :)

Before proceeding further, backup your original Windows Logo files! For simplicity's sake rename the Windows logos as follows, (or name them whatever you want as long as you can remember their new names.):

1. Rename these files to the following:

Location:

C:\Logo.sys
C:\Windows\LogoS.sys
C:\Windows\LogoW.sys

Filename & Change:

Logo.sys changes to WinLogo.sys
Logos.sys changes to WinLogoS.sys
Logow.sys changes to WinLogoW.sys

Final Location:

C:\WinLogo.sys
C:\Windows\WinLogoS.sys
C:\Windows\WinLogoW.sys

2. Now you can proceed to install the Mac StartUp and Shutdown screens! (Remember the new Mac files are already extracted to the proper locations!) Rename these files to the following:

Location:

C:\Mac Logo.sys
C:\Windows\Mac LogoS.sys
C:\Windows\Mac LogoW.sys

Filename & Change:

Mac Logo.sys changes to Logo.sys
Mac Logos.sys changes to LogoS.sys
Mac Logow.sys changes to LogoW.sys

Final Location:

**C:\Logo.sys
C:\Windows\LogoS.sys
C:\Windows\LogoW.sys**

And you're done! The three files are:

**Logo.sys is the startup screen
Logow.sys is the "shutting down computer" screen
Logos.sys is the "Shut down complete" screen**

To uninstall these logos, just reverse these instructions!

TADA!

Disclaimer: This file is not created or in any way endorsed by the copyright holders. Apple Macintosh OS is trademarked by Apple, no copyright infringement is intended.

This file contains icons generated from graphics found on the www, animated cursors generated from files found on the www. The sound files were obtained from the www also.

We edited the wavs for optimal use as the accompanying sound scheme. The desktop wallpapers in this zip file were collected from various places on the www.

This file was made solely as an attempt by myself and my brother to create our own desktop environment. No copyright infringement is intended and we do not take credit for any intellectual properties contained within this zip file. We only take credit for our hard work.

This file may be freely distributed on the sole condition that any form of profit not be recieved as a result of the distribution in any way. Altering the contents of this zip file may render the file useless (so do so at your own risk) but will not in anyway way suggest liability to copyright holders. Do not attempt to take credit for anything appearing in this file and you are at no risk of liable.
