RGB Editor is a small utility useful for selecting and creating RGB colors for programming projects. The values of the red, green and blue components are displayed and easily transferred to your source code files. Custom colors can be defined and saved for use in other coding projects. Custom colors swatches can also be copied to the clipboard.

If you have comments, questions or find any bugs in RGB Editor please feel free to contact me on CompuServe or AOL.

While RGB Editor is offered as Freeware, if you feel that you want to pay something for it you are welcome to send any amount you wish.
