

## Opener

Unpacks various sorts of archived files;  
handy to have around when perusing **ftp** servers.  
Currently handles:

- \* .Z
- \* .tar
- \* .shar
- \* .PS (***Preview*** doesn't catch cap **.PS**)

Be careful making changes from IB – you may  
overwrite `Opener.iconheader`; entries for extra filetypes  
need to be added there by hand. To add a new filetype:

- add code in `Controller.m`
- add an icon to the TIFF suitcase in `Opener.nib`
- add a `-setcreate` option in `Makefile.preamble`
- edit `Opener.iconheader` by hand as necessary

Please **let me know if you add other formats.**
