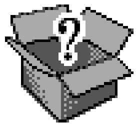
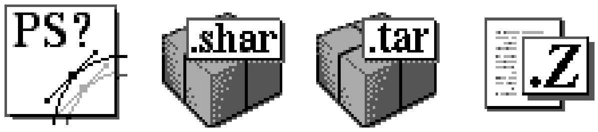
Opener



⇒



Unpacks various sorts of archived files;
handy to have around when perusing **ftp** servers.
Currently handles:

```
*.Z
*.tar
*.shar
*.PS
```
(***Preview*** doesn't catch cap **`.PS`**)

Be careful making changes from IB – you may overwrite `Opener.iconheader`; entries for extra filetypes need to be added there by hand. To add a new filetype:

- add code in `Controller.m`
- add an icon to the TIFF suitcase in `Opener.nib`
- add a `-setcreate` option in Makefile.preamble
- edit `Opener.iconheader` by hand as necessary

Please **let me know if you add other formats**.
