

Welcome to DviInfo:

DviInfo is a little tool for T_EX users, it's main purpose is to get some related Informations about a selected **.dvi** file.

Usage:

If you open a *.dvi* file the main infowindow comes to front, showing you the file's page *quantity*, page *metric (height, width)* and a list of *used fonts*. ± Then you have the ability to select , copy or print the list of *used fonts*.

Hint:

DviInfo is very usefull for inspecting ready made *.dvi*-files (*dokus, manuals etc...*). Use it to find out, if there are used fonts in a *.dvi*-file, which are missing in your actual *NeXT_EX* distribution. And

try to build them by yourself with *Metafont* (as shown below :-) or ...

lion_1.tiff ↵

... (for some people even easier) get them from an actual T_EX ftp-Archive !!!

Thanks...

Thomas Hering , YumYum Software

for his help and advice in Appkit and IB hacks.
