

# Global Pane

The **Global** pane is available only from the **Preferences** panel, and covers those defaults that apply to the entire application and not just to single windows.

The correspondence between graphical elements and preference names:

<u>Type</u>	<u>Title</u>	<u>Preference</u>
<b><u>Name</u></b>		
field	X	WinLocDx
field	Y	WinLocDy

switch	Prompt on Quit	QuitPrompt
switch	Prompt on Window Close	ClosePrompt
switch	Write Stuartrc on Quit	
	WriteStuartrcOnQuit	
switch	Write Stuartrc on logout	WriteStuartrc
switch	Write Directory to Stuartrc	WriteDirToStuartrc
field	Stuartrc	Stuartrc
browser	PATH	ShellPaths

- The **Panel...** button next to the Stuartrc field brings up a Save Panel which can be used to choose the location of the Stuartrc file. If you select a file that exists, you will be prompted whether you wish to overwrite the file. The file is

not actually overwritten until Write Stuartrc is executed, at which time you will **not** be prompted.

- The **Add...** button below the browser allows you to select a directory to add to the browser.
- The **Delete** button below the browser removes the currently selected entries from the browser.
- Paths may be rearranged within the browser by Control-dragging them. Only one path may be Control-dragged at a time.
