

The Tools Menu

The Tools Menu provides access to some Stuart-specific commands.

- **Select Directory... (Command-D)** brings up a standard NeXTSTEP Open Panel which can be used to select a directory. The panel starts out at the window's Directory preference if possible. The selected directory is pasted into the current emulation window as a filename paste - see **Features/Filename Pasting**. If filename pasting is not set up to paste a command, then the

directory is pasted as a ``cd'` command.

- **Select File... (Command-F)** brings up a standard NeXTSTEP Open Panel which can be used to select a list of files. The panel starts out at the window's Directory preference if possible. The selected files are pasted into the current emulation window as a filename paste - see **Features/Filename Pasting**. The files are always pasted as a list of files, never as a command.
- **Subprocess... (Command-1)** brings up the Runtime Inspector panel with the Subprocess pane selected. See **Inspectors/Runtime** and **Inspectors/Panes/Subprocess**.

- **Paste... (Command-2)** brings up the Runtime Inspector panel with the Paste pane selected. See **Inspectors/Runtime** and **Inspectors/Panes/Paste**.
- **Window... (Command-3)** brings up the Runtime Inspector panel with the Window pane selected. See **Inspectors/Runtime** and **Inspectors/Panes/Window**.
- **Emulation... (Command-4)** brings up the Runtime Inspector panel with the Emulation pane selected. See **Inspectors/Runtime** and **Inspectors/Panes/Emulation**.
