

Title.tiff , The Main Menu

TickleServices' main menu consists of the list of entries described below. Some of the menu entries bring up submenus, which are described in the sections following this one.

Info.tiff , The **Info** menu contains entries which give the user information about TickleServices, and which allow the user to communicate information to TickleServices or to the developer. See **Info**.

Tickle.tiff , The **Tickle** menu contains entries which open, save, and otherwise manage TickleServices windows. See **Tickle**.

Server.tiff , The **Server** menu provides entries which control the TickleServices server daemon. See **Server**.

Edit.tiff , The **Edit** menu contains entries which manipulate the text and services within the currently active TickleServices window, including many entries which all compliant NeXTSTEP applications provide. See **Edit**.

- Format.tiff → The **Format** menu contains Page Layout and Font setting entries. If the font used in the document window text areas is changed, it will be remembered when future files are loaded.
- Print.tiff , The **Print** entry brings up the standard NeXTSTEP Print Panel to print out the text in the currently selected TickleServices script or manual section.
- Windows.tiff , The **Windows** menu contains entries corresponding to each open TickleServices window, along with entries to close or miniaturize the current window.
- Services.tiff , The **Services** menu allows other programs (including the TickleServices daemon) to provide services which operate on the current selection.
- Hide.tiff , The **Hide** entry hides TickleServices.
- Quit.tiff , The **Quit** entry exits TickleServices and closes open TickleServices

windows. If any windows are unsaved, TickleServices will allow the user to abort the Quit, Save the windows, or to just Quit.
