

Title.tiff , The Server Menu

The Server Menu provides an interface to the TickleServices server daemon.

- Install.tiff** , Causes the server daemon to be launched. Also arranges for the daemon to be launched on future logins by adding it to the **Workspace LaunchPaths** default.
- Deinstall....tiff** , Causes the server daemon to exit, removes the LaunchPaths entry, removes the services listing from **~/.NeXT/services**, and removes all **TickleServices** defaults from the user's defaults database.
- Update.tiff** , Sends a message to the server which causes it to re-read the TickleServices files and regenerate the services entries.
- Kill.tiff** → Attempts to kill the server by asking it to exit. If this does not succeed, the user is alerted and it tries to kill it by sending a SIGKILL signal.
- Restart.tiff** → Terminates the server as **Kill**, then launches it again.
