

## **Title.tiff , The Tickle Menu**

The Tickle menu provides entries for creating, opening, and saving TickleServices files.

- Open....tiff , Brings up a standard NeXTSTEP Open Panel from which the user can select files with the .ts extension to open.
- New.tiff , Creates a new untitled TickleServices window.
- Save.tiff , Save the current TickleServices window to its file. **Save** first creates a backup file by appending '~' to the filename and moving any previous file to that name.
- Save\_As....tiff , Brings up a standard NeXTSTEP Save Panel from which the user can select a new name for the file to be saved in, after which the window is renamed to the new name.
- Save\_To....tiff , Similar to **Save As...** except that the name of the current window is **not** changed, and the edited status of the window is not cleared.
- Revert\_to\_Saved.tiff , Re-read the current window from the saved file associated with it.

Close.tiff ,

Close the current TickleServices  
window.
