Communicae is a high-performance communication package for the NeXT Computer System, including both DEC VT220 and Tektronix 4010/4014 terminal emulation, as well as standard file transfer protocols. It can be used as a virtual terminal logged in to the NeXT Computer System itself, or to log in to information services and mainframe systems which are not connected to an Ethernet. Communicae is ideal whenever serial communications are required. Communicae supports all documented VT100 features, including adjustable tab stops, host computer setup control, region scroll, US, graphic, and multinational character sets, VT52 mode, full application keypad support, insert/delete line and character, full printer control, 132 column mode, and true double high/wide character emulation.
