

Installation Notes

215626_PixelRule.tiff ↩

837508_TaskArrowSm.tiff ↩ The ***Tailor*** Version 1.0e distribution medium contains the files **InstallationNotes.rtf** (this text), **ReleaseNotes.rtf** (describes the changes in this release) and **Tailor.pkg** (the distribution package).

289303_TaskArrowSm.tiff ↩ ***Tailor*** can be installed on

- NEXTSTEP release 3.0 (NeXT-Motorola), or
- NEXTSTEP release 3.1 and 3.2 (Intel or NeXT-Motorola).

The distribution package contains one single multi-architecture application supporting both Intel and NeXT-Motorola platforms.

install;↩Installing ***Tailor***

916163_TaskArrowSm.tiff ↩ Double click the file **Tailor.pkg** on the distribution medium. This will launch the standard NEXTSTEP installer application.

20146_TaskArrowSm.tiff ↩ Follow the on-screen instructions and make the appropriate choices to complete the installation. If you are not sure about the meaning of some of the choices, just use the proposed defaults.

469422_TaskArrowSm.tiff ↩ Launch ***Tailor*** by double clicking the installed **Tailor.app** file, or drag **Tailor.app** into your dock for easy access and double click the ***Tailor*** icon in the dock.

434604_TaskArrowSm.tiff → Press the *Register* button in the panel that pops up to bring up the registration; registration panel. Fill out your name and organization, and the registration key that was supplied to you in writing. After checking on the software license, press the *Accept & Register* button.

setdefaulttool; → Using ***Tailor*** as default tool for PostScript files

To have PS or EPS files (including print previews from other applications) open in ***Tailor*** rather than in the standard previewer when you double click on them in Workspace, proceed as follows.

759226_TaskArrowSm.tiff → Make sure **Tailor.app** is located in one of the standard **Apps** directories, or is dragged in your dock.

970665_TaskArrowSm.tiff → Select any file with the **.ps** or **.eps** extension and bring up the *Workspace Inspector* panel (from its Tools menu). Choose the *Tools* option from the pop-up list on the inspector panel.

674724_TaskArrowSm.tiff → Select ***Tailor*** in the icon list on the panel, and click the *Set Default* button.

Available Fonts

For best results in using ***Tailor*** for imported PostScript documents,

all fonts used in the incoming documents should be available on the system running **Tailor**.

It is recommended to install at least the standard set of 35 PostScript fonts. Refer to the *Set of 35 standard PostScript fonts* help item ;StandardPSFonts.rtf; for a list of these fonts.
