## Installing and Licensing WatchMe

- If you will be licensing WatchMe with a multi-user network license, log in with the user name aroot on the computer you will be designating as the license server (generally the same computer as the application's file server). Otherwise, log in under your own user name.
- 2. Insert the WatchMe oppy disk into your computer.
- 3. In the Workspace, drag the the WatchMe application from the oppy disk into the directory where it is to be installed. For multi-user licenses we recommend installing it in the /LocalApps directory. For single user licenses we recommend placing it in the Apps directory within your home directory.
- 4. Eject the oppy disk and place the disk back in the package for safe keeping.

- 5. Double click the installed icon to run the application. You will be told that the application is not licensed and will run for 3 minutes in demonstration mode. Click the License button to display the New License panel.
- Enter your license string and either your name or your company name in the ®elds provided. Your license string is found on the disk pocket inside the WatchMe package. Click the License button.
- 7. If you are entering a multi-user network license, another panel will appear requesting information about where the license server will be running. Respond, then click OK.
- After a few seconds a License panel will appear showing your information, signaling that the software is successfully licensed.

- accessed via the Help system. Choose the Help command from the Info menu to display the Help panel.
- 10. If you have problems please contact Otherwise by phone or by email.

All of WatchMe's documentation is on-line and
