

Welcome to WatchMe

WatchMe creates "tapes" by recording the screen activities and sounds of a work session to disk. You record a session, explaining what you are doing while you are doing it. When the tape is played back, viewers hear your voice while seeing what you did. WatchMe is great for creating instructional materials or for documenting your custom applications. WatchMe tapes can be used by themselves, or incorporated into multimedia documents.

Version 1.02 of WatchMe runs on both NeXT and Intel hardware.

Please refer to the on-line Help for a complete description of how to use WatchMe.

If you have not purchased a license for WatchMe but would like to evaluate it further, please contact Otherwise for a free 30 day license. WatchMe will also run unlicensed for 3 minutes, allowing enough time for a quick demonstration of its capabilities.
