UPGRADE/BUGs LIST

ReportBuilder

· *Limitations*
- Partial Undo.

· *Known bugs*
- If a field has a background or text color, it is after impossible to affect him a gray value !

· *Changes since 1.0b*
- It's now possible to drag and drop colors from a color well into a field to change the TextColor (if ALT is down your change affected the Background.

Future enhancements

· *Page Layout*
Use the Page Layout for defining report sizes at start. No need to use Templates every time!

· *Field layout*
Possibility to use display format ('Cobol' like definition).

· *Replace-list*
Possibility to associate for a field a list of values to display, substituting them to values extracted from the database.

· *Compute zones*
Compute zone (group of fields) will be available. Each field will have a computed formulae, SQL like-syntax, based on body fields (ex.: MIN, MAX, SUM, AVG¼). We will associate to each zone an reset event (break on field or break on page) and a display event (same conditions). The position will be absolute or relative regarding to the currecnt position.

· *Graphic objects*

Inside ReportBuilder, possiblity to add some graphic objects, as a separate layer of the report.

· *Units support*
Inches, metric units support.

· *Supports of RTF and picture fields*

· *Graph functions*
Fields of type `barGraph' creating a graphical representation a numeric value (f(min, max)).

· *Pre et Posts-SQL scripts*
A report may have a SQL script executed before and after printing the report.
