QuantaFlow
A SUMERIS™ Accounting System Software

The SUMERIS Accounting System is a series of seamlessly integrated modules providing real-time accounting and business   management software.

Designed in a multi-threaded client/server architecture, it supports multiple network users and distributed information is made available to all client applications anywhere in a network.
Network access to QuantaFlow is totally transparent accross Intel and NeXT computer platforms.

The SUMERIS Accounting System is especially designed to work with NEXTSTEP™and takes advantage of the ease-of-use and power of such an object-oriented operating system.

QuantaFlow is the central module of the SUMERIS Accounting System. It is a complete accounting package including:

- general and subsidiary ledgers,
- accounts receivable
- accounts payable
- extended reporting capabilities
- checkbook management and check printing
and more...

QuantaFlow delivers many interesting features, like:
- *automatic re-instalment and discount adjustments,*
- *copy-and-paste of typed transactions*,
- a unique *hierarchical chart of accounts*,
- *WYSISYG check writing* allowing the creation of your own check designs,
- and   sophisticated *graphical reporting capabilities* using a drag-and-drop interface.

To install   QuantaFlow, follow the instructions found in the file Installationfile.

The QuantaFlow Package version 1.2 includes:
 · **QuantaFlow**, the central accounting application.
 · **QuantaReport**, a graphic module allowing multi-page report creation using a drag-and-drop interface, integrated in QuantaFlow.app.
 · **QuantaServer**, a multi-threaded database server supporting multiple network users and client applications.
 · **QuantaAdmin**, a NEXTSTEP application used to handle administrative tasks, like dynamically creating databases, and managing server and database access control lists.

Other products:
InFlow

InFlow, available in Q1 1994, will complement the system, offering Inventory, Billing and Sales & Purchase orders, all seamlessly integrated with QuantaFlow and the accounting engine.

InFlow allows a non-accountant user to enter an invoice in a WYSIWYG manner, and, in the background, the system generates the proper accounting transaction (easily audited with QuantaFlow). Also, related inventory tables are automatically adjusted, providing a real-time accounting and inventory control.

We invite you to try them and tell us about it. Our policy is to provide the best service you expect; we appreciate your feed-back and carefully review all comments and requests to make even better products.
