

SS&S ObjectWare

There are no runtime license fees for any SS&S ObjectWare; once you have paid for a palette, you do not need to pay again for applications created with that palette. All SS&S ObjectWare is provided with under a floating license for maximum convenience to the developer. Unless otherwise noted, all SS&S ObjectWare is shipping now for both NeXT and Intel hardware, and with the exception of the SSSDBKit+Palette, Software Services and Solutions, Inc., is committed to providing compatible versions of SS&S ObjectWare for Motif and Windows NT.

SSSInputFieldPalette™

The SSSInputFieldPalette allows developers easily to construct user interfaces that perform complex format and content validation on keyboard input. The objects guide user input, preventing errors on a keystroke by keystroke basis.

A simple drag and drop configures an SSSInputField to perform referential integrity checking against a database column. Input format is specified with strings like those used by the standard I/O library, allowing more flexibility than purely graphical specification, while taking advantage of programmers' familiarity with printf() and similar functions.

Error actions can be set easily by the application designer to customize behavior for a particular field.

Price: \$395.00 for a single developer floating license. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details.

SSSMultiViewPalette™

The SSSMultiViewPalette's objects manage window real estate when it is at a premium. The SSSMultiView allows an area to display different panels based on the user's actions.

Different segments of an application can be designed separately and kept offscreen until needed. Unlike similar products, SSSMultiView imposes no limit on the number of panels and allows panels to be integrated from multiple nib files at runtime, allowing several developers to separately develop parts of a UI.

Price: \$145.00 for a single developer floating license. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details.

SSSBarGraphViewPalette™

The SSSBarGraphViewPalette gives instant access to graphical representations of schedules, process life graphs, time lines, and more. The objects of the SSSBarGraphViewPalette work together to create a display of data as bars. Each bar has four distinct visual attributes it can use to display information: starting and ending points, label, and color. An SSSBarGraphView can display single or multidimensional data from a DBKit database fetch, any matrix, or a wide variety of other sources.

The SSSBarGraphView can automatically scroll with time. Visual attributes of the view, such as axis labels, titles, marking style, and scale, can be set with an inspector.

Price: \$395.00 for a single developer floating license. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details.

SSSViewerPalette™

The SSSViewerPalette provides a familiar, FileViewer-like interface to applications that require users to browse through and manipulate file systems, indexes, spreadsheets, and other tree-structured information hierarchies.

The SSSViewer class coordinates the SSSIIconPath, SSSShelf and SSSHierarchyBrowser classes to implement the display and manipulation of hierarchical data, both textually and graphically. The easy-to-use IB-based API allows developers to link to a wide variety of objects and data sources.

Price: \$395.00 for a single developer floating license. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details.

SSSDBKit+Palette™

The SSSDBKit+Palette complements the NEXTSTEP DBKit with a slew of highly functional, well integrated objects for DBKit programming. Simple manipulations in IB can configure an SSSDBBrowser to display data from master/detail relationships in each column. The SSSDBMatrix allows your own

objects to be made DBKit-capable instantly. The SSSDBPopUp gives you a familiar UI tool that allows forced-choices from the unique values of a database column or fetch.

Price: \$295.00 for a single developer floating license. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details.

SSSSPalette™

The SSSSPalette gives custom applications graphical access to powerful statistical and data analysis. The SSSSDaemon provides access to S server processes for applications that use the SSSSPalette.

SSSSInterface class allows applications straightforward, real-time access to the powerful, mature analysis capabilities of the S (or S-PLUS) systems. The SSSSView class displays graphical output inside your custom application. The S process can run on any computer on the network, enabling client-server design of computationally-intensive applications, such as real-time market analysis systems.

Availability: Now, directly from Software Services and Solutions, Inc., for both NeXT and Intel hardware. SSSSDaemon is available for NeXT, Intel, Sun, HP, DEC, SGI, Convex, and other hardware.

Price: \$795.00 for a single developer floating license for the SSSSPalette. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details. Also, \$195.00 for a single CPU license for the SSSSDaemon, which is required for each machine that is to be an S server.

SSSEnclosureViewPalette™

The SSSEnclosureView is an enhanced Text-like object that allows arbitrary enclosures to be dropped into it and dragged out of it. Graphics, sound files, documents, spreadsheets, directories, and files can be included in an SSSEnclosureView, which can be archived to a stream, stored in a database with the DBKit's object type, or written as a file in NeXTMail format. An SSSEnclosureView can be configured to allow documents and applications to be launched from it, as well.

Price: \$295.00 for a single developer floating license. Multi-developer and site licenses are available at discounts. See the Multi-developer license discount schedule below or contact SS&S for details.

Multi-developer license discount schedule:

<u>users</u>	<u>discount off single developer license price</u>
2 to 5 users	10.0% off
6 to 10 users	16.0% off
11 to 15 users	21.0% off
16 to 20 users	25.0% off
21 to 30 users	28.5% off
31 to 40 users	29.5% off
41 users and up	30.0% off
