

# **WANConfigure™**

WANConfigure allows any NEXTSTEP user to set up electronic mail connections, without having to know about sendmail, modem configuration, or NetInfo. WANConfigure intelligently configures the Wide Area Network (UUCP) and electronic mail system for NEXTSTEP computers. The user need only be concerned with email objectives; WANConfigure handles all the details of configuration and setup.

WANConfigure handles all types of inter-computer and inter-network UUCP connections. Configuration for commercial email services is especially easy with WANConfigure's single button configuration for UUNET, NETCOM, and other popular commercial service providers.

WANConfigure can turn a computer into a corporate email gateway, providing email connectivity to the entire enterprise. And WANConfigure makes it easy to establish secure private networks between remote sites such as regional offices. Users need not be concerned with the details of link configuration, since WANConfigure hides the details of the network and email architecture.

WANConfigure's exclusive money-saving Call-by-Cost™ feature allows you to gain control of telephone and connectivity expenses by storing mail and only making calls during low rate periods. WANConfigure knows the rate structures and plans of the primary long distance carriers (and is extensible to learn about additional carriers). A single choice from a menu of options configures a link for Call-by-Cost with your carrier. WANConfigure even allows you to graphically define your own calling periods for a link.

WANConfigure knows about and can configure the popular fax, v.32, v.32bis, PEP, and other high-speed modems, and it is

extensible for additional modems and devices.

WANConfigure is designed as a module for the WANManage Open Network Management Framework. WANConfigure can be purchased separately for use by current licensees of WANManage, or bundled with WANManage and other networking modules, such as UUCPManager, as a complete starter solution.

**Platforms:** WANConfigure is available now under NEXTSTEP for both NeXT and Intel platforms. WANConfigure will be available soon under X windows for Sun, HP, DEC, SGI, IBM, and other platforms.

**Price:** Bundled with WANManage, \$95.00 for a single computer license. Module only, \$75.00 for a single computer license. Multiple machine and site licenses are available at discounts. See the Multiple license discount schedule below or contact SS&S for details.

### **Multiple license discount schedule:**

<u>price</u>	<u>licenses at a site</u>	<u>discount off single license</u>
	2 to 5	10.0% off
	6 to 10	16.0% off
	11 to 15	21.0% off
	16 to 20	25.0% off
