

WANManage™

WANManage provides an open framework for network management. Administrators with WANManage on their dock have a single, well-structured interface to the management tools appropriate for their network. With WANManage, you pay for and add only the network management modules you need. That can mean big savings on a network management suite best suited to your needs.

The *WANManage Open Network Management Framework* has a published interface for new modules. This allows third parties and even end users to develop a wide variety of networking modules, such as SNMP consoles and Internet routing managers, for integration with WANManage.

WANManage tools have full access to a rich set of networking and display methods, which encourages a standard look and feel across all WANManage tools.

The first two WANManage modules, WANConfigure and UUCPManager, are available now from Software Services and Solutions, Inc.

Price: \$35.00 for a single user floating license for the WANManage Open Network Management Framework. Multi-user and site licenses are available at discounts. See the Multiple license discount schedule below or contact SS&S for details.
