

This module gives the Preferences application basic alarm clock type functionality. The module supports two alarms and 3 repetitive chimes.

Note:

FSAlarmClock will remember settings across logins. But, you must bring up this panel to enable the alarms and chimes.

Priority of notification

FSAlarmClock has a priority that decides which alarms or chimes will sound when more than one are set to the same time. The priority is:

- Alarm 1
- Alarm 2
- Full Hour Chime
- Half Hour Chime
- Quarter Hour Chime

Alarms

The two alarms allow a user to set a single shot audio notification. They function in a similar manner to a normal alarm clock.

Chimes

The chimes are repeating notifications based on the quarter , half and full hour.
