THANK YOU FOR PURCHASING SOFTWARE FROM DATAWARE!

Ant Attack

Ant Attack is an action packed game. Giant ants have invaded the earth and it's your job to destroy them before they take over. Ants multiply on the screen and you have a choice of three "weapons" to defeat them. Ant Attack has a choice of three levels of difficulty (easy, medium, and hard) and 100 levels to defeat. It supports joysticks and sound cards (but it also supports the keyboard and the computer speaker). It has music, sound effects, and VGA graphics!

Checkbook

Checkbook is an electronic checkbook register. You enter transactions into Checkbook just as you would on your paper version. But instead of pulling out your calculator each month and struggling with the chore of balancing your checkbook, mark off the items in Checkbook that are shown on your monthly statement and Checkbook will calculate it for you. Without the learning curve of a complicated accounting program, you get the job done.

Coloring Book

Children will have hours of fun with this electronic coloring book. Large buttons for color selection make it easy to use even for young children. No more broken or lost crayons with this computer version and the pages can be colored over and over again with the dozens of available colors.

Fantasy Chess

Play the game of chess while transforming into fantasy creatures. Choose from different character sets for your chess pieces including dinosaurs, insects, traditional pieces, and more. This chess set is excellent for learning to play chess in that moves are highlighted and the difficulty levels (ten in all) were designed for beginner chess players. Veteran players will find it a good chess set for practicing strategic moves. Play against another person or the computer. There's also an option for setting up the board with situations.

Fire Fighter

As a fire fighter, you combat fires throughout forests. While choosing from your tools of a hose, an ax, and a shovel, you must put the fires out before houses are destroyed. You work against time and for points.

The game has three levels of difficulty (easy, medium, and hard) and supports joysticks and sound cards (but it also supports the keyboard and the computer speaker). It has music, sound effects, and VGA graphics.

Letter Drop

Letter Drop is first class edutainment software -- learn while being entertained. Guess the correct letters to form words before your airplane runs out of fuel. If you're successful, you'll become a letter air drop qualified pilot.

Stamp Pad

Great imaginary play for kids (and kids at heart) with this paint program. It has a graphic interface, so it's easy to use. It comes with over 600 stamps, more than 90 colors, and dozens of full-page graphic images.

GET TWO FREE GAMES WHEN YOU ORDER STAMP PAD...

Sliding Puzzle: The computer version of the classic tile game that you hold in your hands and slide around the tiles with your thumbs.

Find the Flag: This is the ultimate concentration game. Match pairs of flag tiles until the board is cleared. Great for memory game enthusiasts.

Supernova

Supernova is a 3-D action game in which you fly your starship and combat enemies with laser guided missiles, those with kamikaze attitudes, and others that cloak in the face of danger. The game has three levels of difficulty (easy, medium, and hard) and supports joysticks and sound cards (but it also supports the keyboard and the computer speaker). It has music, sound effects, and 3-D VGA graphics!

Winged Warrior

Here's an adventure you don't want to miss! In this role-playing game, it is your duty as a warrior to restore peace to the kingdom. You do this by gathering information from the people you meet, training to become a powerful warrior, and fighting enemies along the way.

The game supports joysticks and sound cards (but it also supports the keyboard and the computer speaker). It has music, sound effects, and VGA graphics.
