

Chapter 21

Tools

MenuTools.tiff ↵

Elements...

Brings up the Element Creator panel if it isn't already on-screen. (See Chapter 22 for a discussion of the various Element Creator palettes.)

Inspector...

Brings up the Inspector panel if it isn't already on-screen. (See Chapters 23±24 for a discussion of EquationBuilder's various inspectors.)

Colors...

Brings up the standard NeXT Colors panel. You can use this panel to change the color of any selected element or group of elements by simply dragging over a color swatch from the Colors panel and dropping it onto the selection. You can also use the Colors panel to set a new default color for the equation as a whole by dragging-and-dropping a color swatch into the **Default Color** color well on the Equation Inspector (see Chapter 23). Similarly, you can change the default color for new equations by changing the color in the **Default Color** color well on the Preferences panel (see Chapter 18).
