Why do I need Graphity when the Questor spreadsheet contains graphs?
For four different reasons:
· If you only want to display existing data without any calculations, you do not need a spreadsheet.
· It is often better to have the data in a spreadsheet and the graph in a separate document. This is the functionality you get with Questor and Graphity together.
· If you only want to display data from a custom application it is much easier to use the Graphity API.
· Questor does not support 3D graphs.
