System Load Monitoring Application

LoadEye_SG-Half.tiff ↵

LoadEye displays your computer's system load in a Load Monitor that you can place anywhere on your screen. By observing how your actions affect your computer's system load, you can learn to use your computer more efficiently and effectively. For the software developer, LoadEye provides an indication of how much load an application puts on a system. System administrators will benefit from the ability to observe changes in system load on multiple machines connected to a network. LoadEye contains on-line help and supports both Mach factor and UNIX system load average.

Requires NEXTSTEP Release 3.1 or higher.
Now shipping in Multi-Architecture Binary (MAB) format.
