

Because of the diverse set of files included in the distribution, the Simulation Kit is delivered in a NeXT Installer package. The Installer will install the Simulation Kit relative to the root directory in the following locations:

/LocalDeveloper/Examples/SimulationKitExample source code

/LocalDeveloper/Headers/simkitHeader and precompiled header files  
(indexed)

/LocalLibrary/Documentation/SimulationKitIndexed documentation

/usr/local/lib/libsimkit.aObject library containing core and example objects

The default installation locations should not be changed so as to ensure that the demonstration version operates correctly.
