Layout Board to Image Display Window

You can transfer a single TextArt image object from a Layout Board window to the Image Display Window in several ways:

> -**Copy** or **Cut** the selected object, move to the Image Display Window, and **Paste**.

> **-Double-Click** or **Command-Click** on a TextArt image. The image will be copied to the Image Display Window, which will also become the key window. The TextArt image object will remain in the Layout Board window and will not be affected by any changes you make in the Image Display Window. You can transfer another copy of the image from the Image Display Window to the Layout Board window as described in the Display to Layout topic.

If you have resized the TextArt image in the Layout Board Window, the Image Display Window will reflect the new scale.

You edit a single image in the Image Display Window. When you copy an image from a Layout Board window, it replaces the image that was in the Image Display Window. If you transfer a group object from a Layout Board window, the first TextArt image in the group will be copied to the Image Display Window.
