

## TextArt to Other Applications

If you want to transfer an image from TextArt to another application, and you're in the Image Display Window, you can:

- Save the image as a PostScript file. To do this, choose **Save To...** from the Window Menu and pick the PostScript option. This file can then be opened by other applications that can read PostScript files.

- Choose **Copy** or **Copy Display** from the Edit Menu, open the other application, and **Paste**. The application must be able to understand PostScript.

- Click** and **Drag** a selection rectangle that encompasses the part of the image you want. Move to the other application and **Paste**. This allows you to transfer partial images.

From a Layout Board window, you can:

- Save the Layout Board as an EPS or TIFF file. To do this, choose **Save To...** from the Window Menu and pick the PostScript or TIFF option. This file can then be opened by other applications that can read PostScript or TIFF files.

- Select the object(s) you want to transfer. Choose **Copy** from the Edit Menu, switch to the other application, and **Paste**. The application must be able to understand PostScript or TIFF.

You can't transfer a PostScript image into the TextArt Image Display Window.
