1.2 Introduction

Thankyou for purchasing the 5th CD in the 17 Bit Software Collection. We hope that you will enjoy the contents of this disk, of which a lot of time and effort has gone into the making, both by us and obviously by the authors of the programs that appear on here.

Many of the programs on this compilation are Shareware. This means that if you use a particular program often, you will be expected to send a donation to the author. Some programs will have disabled features in them, i.e save or print, which will only be enabled when you send off the registration fee, and the author has sent you the full version. Registering your software, will in most cases give you preferential treatment from the author, i.e bug fixes, technical support and updated versions.

Even if the program is not shareware, and you enjoy using it, please think about dropping a line to the author just to let him know. All programmers enjoy a bit of praise from time to time.

If you have a written a program which you think is worthy of inclusion in the library, then please do not hesitate to send it in, with a short note

explaining what it does and the machine requirements to run. We offer a one
for one swap on any disk accepted into the library.

With the price of hard drives dropping through the floor, you may find that
many of the titles on this CD are either HD installable or in the case of
AGA demos, HD only. Please remember that when a program is installed to
hard drive it is possible that it may require extra memory to run. If a
program runs fine from floppy, but fails to run when installed, read the
documentation about the requirements of that particular program.

If you have any problems running any of the programs you have taken from
this CD, please read the documentation about requirements, i.e. Kickstart
version, memory requirements, BEFORE calling us for help. It may just save
you the price of a phonecall!!!

17 Bit Software take no responsibility whatsoever for any loss or damage
from use or misuse of any of the programs on this compilation. This
compilation is copyright 17 Bit Software 1995. All original program
copyrights are held with the individual authors.

If you have any queries about the CD, submissions for the library or
anything else for that matter either write or call us.

1.3   Instructions on Use

It really is dead easy to use this CD. Honestly. Just click on a category
of disks that you may find interesting. Read the disk descriptions and if
you like what you read, click the Unpack Disk button. A requester will
appear asking you which device you would like to unpack to. Select the
device name of your choice and click on OK. Insert a blank disk (it doesnt
even have to be formatted first!!!) and hit return. Thats it, easy.

A big thankyou also goes out to the programmers out there who still have

faith in the Amiga. Without you lot this CD wouldnt be possible. Some personal thanks to Kumfy Ken, Ben Jarrett and John Marshall for being major contributors to the library. Also thanks to Eddy Morrison & Stuart Allen for there help.

This CD was created using the following hardware & software:-

```
Amiga A3000         3MB RAM, 68882 FPU  1.0Gig SCSI 2 Hard Drive.
Amiga A1200         6MB RAM, 68882 FPU, 60MB Hard Drive.
486 DX2/66 PC       8MB RAM, 540 MB Hard Drive.
Pioneer DRM-600     6 X CD-ROM Multichanger.
Zappo CD-ROM Drive
Yamaha CDE1000      Quad Speed CD Cutter
Cygnus Ed V3.5
DMS WinTurbo V1.12
WinOn CD to GO
DirectoryOpus V4.12
VirusChecker V6.58
VirusZII V1.17
QuarterbackTools V2.2
