M31 Project Plan

Alternative Energy Production

I will make a webpage dedicated to researching alternatives to fossil fuels for generating power. Not only are fossil fuels harmful to the environment, they also are a limited resource because they are not renewable; this is the reason why we need to seek alternatives to our energy needs. I will discuss three alternatives (in depth) and a few other alternatives (in summary) to fossil fuels including their pros and cons. The alternatives I will discuss in depth are: Nuclear power, Solar power, and Wind power.

Outline:

Nuclear Power

Solar Power

Wind Power

Other Alternatives: Tidal, Hydroelectric, Wave, and Geothermal Power
