ú   **Minimum configuration required.**

> PC compatible
> Processor Pentium 75 or better
> 8 Mb of RAM minimum
> Operating system Windows 95.
> 65.536 color graphic card or better
> Audio card - Sound Blaster compatible
> Mouse
> minimum 10 Mb free on hard disk
> Double velocity CD-Rom reader or better

Installation

1.   Make sure that the hard disk on which you are going to install the game has 10 Mb free minimum. In addition, please bear in mind that during the game, you will be offered the possibility to capture images (snapshots) which will be saved on your hard disk. These images will require between 12 and 40 Mb more.

Insert Virtual Top Model nº 1 CD-Rom in your reader. Make a double click on the icon " Mi Computer" , then a double click on the icon of your CD reader, and finally a double click on the installation icon " setup" . Then follow the instructions given in point nº 2 hereunder.

2.   When executing the programme Setup, it will ask you in which language you wish to continue the installation process. Once chosen, a window with an information message will appear, press the " next>" key after reading it, and you will get access to a window when you will be asked the name of the destination directory of the programme installation (by default VTM). The programme will install the files on your hard disk, and, when done, will offer you the possibility to read the file Readme.

Now you have a group of programmes called Virtual Top Model where you will find the game (Virtual Top Model) in its three languages, its uninstallation (Uninstall Virtual Top Model), and other technical and information icons.

IMPORTANT : It is recommended to de-activate all the other programmes or applications before initiating VTM.
