IBM

Wireless Solution Design

Help to leverage and protect the benefits of your wireless e-business with secure and resilient solutions

Advances in wireless technology and pervasive devices create opportunities for new and innovative e-business solutions.

As organisations become more dependant on these solutions to contribute to revenue growth and business efficiency, building a trusted environment that meets their unique security and privacy requirements has become crucial in order to safeguard the business goals and objectives.

To a large extent, a company's success in wireless e-business will depend on its ability to manage the risks and challenges introduced by this new and rapidly evolving environment.

IBM's **Wireless Solution Design** service will help you to start planning and implementing security strategies and end-to-end solutions for mitigating these risks.

IBM has aligned its expertise in wireless security to specific industry business problems and opportunities in the wireless environment. We can help your organisation plan, architect, design and build wireless e-business solutions that meet your unique security and privacy requirements.

IBM will help you to build a security strategy and to define the necessary security requirements, functions and components required for ensuring that your wireless e-business solution satisfies the business requirements and acceptable levels of risk.

Using the proven IBM method for architecting secure solutions, the security functions and components will be built into a secure solution design that is fully aligned with your existing IT strategies and architectures.

IBM has the depth of knowledge required for building secure end-to-end solutions that covers wireless devices, operating systems, middleware, applications, networks and development environments.

IBM will also assist you to build the necessary security and risk management processes to help you ensure your wireless e-business remains secure into the future.

Service covers

- The development of a strategy for implementing a corporate wide approach for meeting your security requirements and enabling consistent security across your wireless e-business initiatives
- The development of security and privacy requirements and policies to effectively align your infrastructure to your business objectives
- The development of a secure and resilient solution design that meets your unique security and privacy requirements

- The integration of proven security functions and components into your new or existing wireless e-business solution
- The development of security processes required for successful wireless e-business operations and risk management
- A customised set of documentation that details security and privacy requirements, security policies, processes and the security architecture and design required to implement and manage your wireless e-business solution

Price

The contract for IBM's **Wireless Solution Design** is individually priced. Taxes and applicable travel and living expenses are extra.
