Where this package relies on other packages, the additional packages are listed below it.

Author(s)	Phil Ide Bjørn Kaarigstad

Packages	Description
• Folder Browser	The FileOpen dialogue is unsuitable for selecting just a directory. This is where DirSelect() comes in. It presents a tree-view similar to the Windows Explorer browser, recognising floppy and hard drives, cd-roms etc. as well as network drives. The dialogue can be set to initially highlight a given directory, and returns the full path including a trailing backslash. Complete with icon files, test module and project file. This is an excellent example of extensive manipulation of a TreeView, using threads to perform background processing, use of context-menu's and inter-control synchronisation. It is also an excellent example of what can be achieved through internet-based co-operative programming.
