Where this package relies on other packages, the additional packages are listed below it.

Author(s)	Phil Ide

Packages	Description
• Hashtest	This is an example of using the hash class (XbHash). It oads a plain text file and indexes each word in the file. It displays the file in an RTF editor (readonly). You can select a word from the combobox, or just type one in. The display will update and the selected word will be highlighted wherever it appears (you may have to scroll the page if the word is not currently visible).
