PGDeref

Close Window

Where this package relies on other packages, the additional packages are listed below it.

Author(s)	Phil Ide

Packages	Description
• PGDeref	Dereference pointers returned from 3PP DLL calls.
	DllCall() and DllExecuteCall() automatically dereference pointers that are returned. However, if pointer-to-pointers are returned, only the first level of indirection is resolved, and you get left with a pointer (which is seen in Xbase++ as a number).
	PGDeref() accepts a pointer as a parameter and dereferences it.
