MO5/MacOS

Current Version
v2.0.6 - May 11th, 1999

MO5/MacOS is a Thomson MO5 emulator for the Macintosh.

MO5/MacOS runs most Thomson MO5 software without problems, and with full sound. The emulator uses an AZERTY keyboard layout, just like the original machine. Also, the user interface can quickly be toggled between English and French.

arcel O Cinq, the emulator MO5/MacOS is based on, was initially developed for MS-DOS by Gilles Fetis. The DOS source code is available directly from Gilles on request. The Macintosh source is not available at this time.
