

MAIN FEATURES

KeyStrokes 2 provides a fully functional on-screen keyboard that you can use to type with the mouse anywhere you would use a normal keyboard (applications, dialog boxes, etc.). Below the main (new) features are listed.

New and improved features in version 2.1

- Σ Now fully compatible with Mac OS 9.1.
- Σ Improved type engine (100% more responsive).
- Σ Now full compatibility with MS Word and Typelt4Me 4.8.2.
- Σ Much improved word prediction (especially for short words and words with diacritical marks). Now predicts even before typing.
- Σ Four keyboards: standard, extended, extended with numeric keypad and alphabetic.
- Σ Assign shortcuts to any text (including tabs and returns) of up to 32000 characters.
- Σ Separate suggestion lists for words and shortcuts for more efficiency.
- Σ Edit words and shortcuts with a double click.
- Σ Customize the organization of the keyboard (location of prediction area and display of icon button bar).
- Σ Audio-feedback as you type.
- Σ Merge dictionaries
- Σ Plus many more improvements and fixes.

Features already present in version 2.0

- Σ Type with a mouse (or other input device) instead of a keyboard in virtually any window or dialog box.
- Σ Turn on modifier keys (shift, option, command, and control) to shift-click, option-click, control-click and command-click or use a command-key combination to perform a menu command.
- Σ Select from multiple keyboard sizes for the on-screen keyboard.
- Σ Select any display font for the on-screen keyboard.
- Σ Select any Keyboard Layout (also from most non-Roman scripts) and KeyStrokes will automatically adapt its keyboard and display font.
- Σ Intelligent, self-learning, language-independent word prediction for typing up to twice as fast.
- Σ Use multiple dictionaries for different languages and/or different subjects. Free dictionaries available for download.

- Σ Learn KeyStrokes your vocabulary by learning from text files and importing/exporting of dictionaries.
- Σ Define shortcuts to any piece of text.
- Σ Use an on-keyboard button-bar to perform common actions.
- Σ Shrink/Expand KeyStrokes with a single click on one of the button-bar buttons.
- Σ Accelerated for PowerPC (both 68K and a PowerPC versions are available).
