

Traitors Gate 1.0 Read me file

System requirements

The easy definition:

Any computer bought in the last two years should work.

The more technical definition:

133 mhz PowerPC (200 mhz if using a 603 CPU), the faster the better

32 Mb RAM (48 Mb recommended)

6x CD (8x recommended)

70 Mb free hard disk space

We're very excited about this game, we hope you will be too after playing this demo!

One or two things that is good to know, though:

Quicktime is necessary to play the game, and will be included in the full version install.

To keep the core download as small as possible we won't (and for licensing reasons, we can't) distribute Quicktime.

To get Quicktime 3, go here and follow the links:

<http://www.traitorsgate.com/>

or here:

<http://www.apple.com/quicktime/download/index.html>

have fun!
