List of Figures xiii

List of Tables xv

IRIX Admin Manual Set xvii

About This Guide xix
What This Guide Contains xix
Conventions Used in This Guide xx
Additional Resources xxi

1. Understanding Silicon Graphics' Networking Products 1
Networking Hardware 1
Networking Hardware Options 3
Controller Interface Names 3
Networking Software 4
Optional Networking Products 5

2. Planning a Network 7
Planning the Physical Network 7
Repeaters, Bridges, Routers, and Gateways 8
Performance Planning 9
Wide Area Networks 10
Internet Protocol Addresses 13
Format of Internet Protocol (IP) addresses 13
Obtaining a Network Number 15
Domain Names 17
Obtaining a Domain Name 17
Subdomains 17

The Internet 18
Before Connecting to the Internet 18
Contacting Your Local Network Information Center 19
Online Information Sources 22
Name-to-Address Mapping 24
The /etc/hosts database 24
Domain Name System 25
Network Information Service (NIS) 25
Planning to Subnet Local Networks 25
Allocating IP Addresses 27
Planning for Network Security 28
Using Common Network Applications 28
Electronic Mail 29
Network File System (NFS) 29

3. Setting Up a Network 31
Configuring an IRIS System for a Network 31
Attaching Your Station to an Ethernet Network 32
Checking the Network Software Configuration 34
Modifying the Hosts Database 35
Naming Your Station 37
Testing Your Network Connectivity 37
Setting Up a Router 38
Configuring a Router With Two Interfaces 38
Configuring a Router With More Than Two Interfaces 39
Configuring Routing Behavior 40
Turning On Multicast Routing 41
Understanding Where Multicast Packets are Forwarded 41
Setting Up Tunnels to Support Multicast Packets 43
Updating /etc/rpc for NIS Users 44
Subnetting a Network 45
Setting the Netmask 45
Rebooting the Station 46

Modifying the Network Interface Configuration 46
Modifying the Interface Name 47
Modifying the Interface Address 48
Changing Network Parameters 49
Modifying the ifconfig-#.options File 49
Dynamic Host Configuration With Proclaim 51
Configuring the DHCP Server 52
Configuring the DHCP Relay Agent 52
The Proclaim Client 53
Limitations and Restrictions 53
Creating a Local Network Script 53
Turning On Remote Access Logging 54
Setting Up Network-Wide Services 54
How to Set Up a Proper Anonymous FTP Account 54
Setting Up an InSight File Server 58
Troubleshooting Your Ethernet Connection 62
Cable Problems 62
Late Collisions 62
Packet Size 63
Unable to Contact Server System 64
Checking Additional Network Interfaces 64

4. Managing a Network 67
Network Startup and Shutdown 67
Network Initialization Process 68
Network Shutdown Process 69
Network Management Tools 69
Interpreting Network Statistics 72
Testing Network Connectivity With ping 72
Measuring Network Throughput With ttcp 73
Collecting Network Statistics With *netstat* 74

Troubleshooting Poor Network Performance 74
Hardware Problems 75
Network Configuration 75
Network Daemons 76
Packet Size 76
Kernel Configuration 77

5. SLIP and PPP 79
Overview 80
Installing the Software 81
Selecting a Modem 82
IP Addresses for SLIP and PPP Clients 82
Configuring a System for Dial-Out 83
Configuration Files for Dial-Out 83
Sample SLIP Configuration for Dial-Out 86
Sample PPP Configuration for Dial-Out 87
Configuring a System for Dial-In 88
Configuring SLIP for Dial-In 88
Configuring PPP for Dial-In 90
SLIP and PPP Routing and Address Allocation 90
Proxy-ARP Routing 91
SLIP/PPP Subnet 93
Connecting Two Networks With SLIP or PPP 93
Using Dynamic Address Allocation With PPP 93
Configuring a Bidirectional Link 94
Starting SLIP or PPP at Boot Time 94
Demand Dialing 95
NFS Over SLIP or PPP 95
File Transfer Over SLIP or PPP 96
Troubleshooting SLIP and PPP Links 96

6. BIND Name Server 99
The Domain Name Service 99

BIND Servers and Clients 101
Master Servers 102
Slave and Forwarding Servers 103
Caching-Only Server 103
Clients 104
The BIND Configuration Files 104
BIND's Boot File 105
BIND's named.hosts File 107
BIND's named.rev File 107
BIND's localhost.rev File 108
BIND's root.cache File 108
BIND's /etc/config/named.options File 108
Configuring Hostname Resolution With /etc/resolv.conf 108
Setting Up a BIND Configuration 109
Configuring the Primary Server 111
Configuring the Secondary Server 115
Configuring a Caching-Only Server 116
Configuring the Forwarding Server 117
Configuring a Slave Server 118
Configuring the Client 118
Managing the BIND Environment 119
Adding a New Station 119
Deleting a Station 119
Adding Another Domain 120
Management Scripts 120
Debugging named 121
SYSLOG Messages 121
The nslookup Command 122

7. UUCP 125
Choosing TCP/IP or UUCP 126
Hardware Requirements for UUCP 127

UUCP Commands 127
UUCP User Programs 127
UUCP Administrative Programs 128
UUCP Daemons 129
Supporting Databases 130
The Devices File 131
The Dialers File 135
The Systems File 138
The Dialcodes File 141
The Permissions File 142
The Poll File 149
The Sysfiles File 150
Other UUCP Files 151
UUCP Administrative Files 151
Setting Up UUCP 153
Determining the Remote and Local Stations 154
Making the Physical Connection 154
Configuring the Local Station 155
Configuring the Remote Station 158
Setting Up UUCP on a TCP/IP Connection 161
Testing the UUCP Connection 162
UUCP Error Messages 165
ASSERT Error Messages 165
STATUS Error Messages 167

8. IRIX sendmail 171
The Mail System 171
An Overview of sendmail 173
System Organization 174
How sendmail Works 175
The sendmail Daemon 176
sendmail Scripts 176
sendmail Related Files and Directories 177
sendmail Commands 180

Aliases Database 181
Building the Aliases Database 181
Testing the Aliases Database 182
Alias Database Problems 183
List Owners 183
sendmail Network Configurations 184
Mail Domains 184
Mail Forwarders 185
Mail Relays 185
User-Configurable Macros and Classes 186
Domain Name Macro and Class (D) 186
Forwarder Station Name Macro and Class (F) 187
Relay Station Name Macro (R) 187
Top-Level Domain Macro (T) 188
Killed Stations Class (K) 188
Pathalias Database Macro (P) 188
sendmail Planning Checklist 188
Configuring sendmail 189
Customizing the sendmail.cf File 190
Modifying the Aliases Database 199
Starting the sendmail Daemon 201
Managing sendmail 201
sendmail Command-Line Flags 201
Debugging Flags 203
Using a Different Configuration File 204
The Mail Queue 204
The .forward File 206
Sendmail Questions, Problems, and Troubleshooting 207
Notes to Current sendmail Users 208
MX Record Support 208
Multi-Token Class Match 208

A. BIND Standard Resource Record Format 211
Standard Resource Record Format 211
$INCLUDE 213
$ORIGIN 213
SOA—Start of Authority 213
NS—Name Server 214
A—Address 215
HINFO—Host Information 215
WKS—Well-Known Services 215
CNAME—Canonical Name 216
PTR – Domain Name Pointer 216
MB—Mailbox 216
MR—Mail Rename Name 217
MINFO—Mail Information 217
MG—Mail Group Member 217
MX—Mail Exchanger 217
RP—Responsible Person 218
TXT—Text 219

B. IRIX sendmail Reference 221
sendmail Command-Line Flags 221
Changing the Values of Configuration Options 221
Delivery Mode 222
Queue Mode 222
Daemon Mode 222
Verify Mode 223
Test Mode 223
Debugging Flags 223
Using a Different Configuration File 224

Tuning 224
Timeouts and Intervals 225
Forking During Queue Runs 226
Queue Priorities 226
Load Limiting 227
Log Level 228
The Configuration File 229
The Syntax 229
The Semantics 234
Relevant Issues 242
Flags, Options, and Files 247
Command-Line Flags 247
Configuration Options 248
Mailer Flags 251
Support Files 253
Debugging Flags 254
