Index

A

adding stations (with BIND), 119
administration, system
  documentation, xvii-xviii
aliases (mail), creating, 199
aliases database
  building, 181
  format of, 181
  modifying, 199
  rebuilding, 180, 182
  testing, 182
  troubleshooting, 183
  updating, 200
aliases file, 179
arp command, 70
ASSERT error messages (UUCP), 165

B

BIND
  adding domains, 120
  adding new stations, 119
  and caching-only servers, 103
  and forwarders, 107
  and network planning, 25
  and *nslookup*, 122
  and the */etc/hosts* file, 25, 36
  boot file, 105
  caching-only servers, 106
  caching-only server setup, 116
  client-server configurations, 101
  database files, 104
  database management, 119
  debugging, 121
  deleting stations, 119
  /etc/config/named.options file, 108
  forwarding servers, 103
  forwarding server setup, 117
  localhost.rev file, 108
  management scripts, 120
  master servers, 102
  named.rev file, 107
  organization of, 100
  primary master server, 106
  primary server setup, 111, 118
  root.cache file, 108
  secondary master server, 106
  secondary server setup, 115
  server configurations, 102
  setup example, 110
  slave mode, 107
  slave servers, 103
  SYSLOG messages, 121
BIND database and MX records, 207
BIND host lookup routines, 99
boot file, BIND, 105
bridge, definition of, 8

C

caching-only server, BIND, 116

caching-only servers, 104, 106
chkconfig command, 68
client setup, BIND, 118
configmail script, 177
configuring
  network controllers, 4
  network routers, 38
connecting to the Ethernet, 32
controller boards, and network troubleshooting, 75
controller interface names, 3
controllers (network), configuring, 4
cu command (UUCP), 127

D

database files, BIND, 104
database management, BIND, 119
DBM database, 180, 182
deleting staions (with BIND), 119
Devices database (UUCP), 130, 131
DHCP
  client configuration, 53
  network configuration, 51
  relay-agent configuration, 52
  server configuration, 52
Dialcodes database (UUCP), 131, 141
Dialers database (UUCP), 131, 135
domain name macros and classes (*sendmail.cf* file), 186
domains
  definition of, 100
  top level, 101
domains (BIND), adding, 120
domain space, definition of, 100

E

editing the */etc/hosts* file, 37
electronic mail and network planning, 29
/etc/chkconfi file, 34
/etc/config/ifconfig.options file, 49
/etc/config/named.options file, 108
/etc/config/netif.options file, 46, 47
/etc/fstab file, 68
/etc/hosts file, 68
  alternatives to, 24
  editing, 36
  host names in, 24, 35
  router entries, 38
/etc/init.d/mail script, 176
/etc/init.d/network initialization script, 68
/etc/init.d/network.local script, 53
/etc/init.d/network script, 38, 53, 69
/etc/sys_id file, 36, 68
Ethernet, testing, 62-65
Ethernet connections to an IRIS system, 32

F

forwarders and BIND, 107
forwarding, controlling on routers, 40
forwarding server, BIND, 117
.forward mail file, 206

G

gateway, definition of, 8
genperm command (UUCP), 129

H

hardware options (network), 3
hardware requirements (network), 1
hosts database
  modifying, 35
  router entries in, 38
hosts database alternatives, 24

I

ifconfig command, 69
ifconfig-hy.options file, 68
ifconfig.options file, 49
inetd daemon, 69
initializing the network, 68
InSight, using NFS, 58
InSight servers, 58
Internet addresses
  and BIND, 13
  and NIS, 13
  and subnetworks, 26
  classes of, 26
  obtaining, 15
  planning, 13
Internet Control Message Protocol (ICMP), 37
interpreting network statistics, 72
ipfiltered daemon, 68
IRIS Networker, 72
IRIX administration
  documentation, xvii-xviii

K

kernel parameters and networking, 77

L

localhost entry in */etc/hosts* file, 36
localhost.rev file, 108
local station (UUCP), configuring, 155
local stations (UUCP)
  identifying, 154
logging remote access, 54

M

mail domains, 184
mail forwarders, 185
mailq command, 180
mail queue, 204
mail relays, 185
mail system components, 172
Maxuuscheds file (UUCP), 151
Maxuuxqts file (UUCP), 151
modem connections, 2
modifying the hosts database, 35
mqueue directory, 179
MX records, 207, 208

N

named.boot file, 105, 120
named daemon, 120
named.host file, 107
named.hosts file, 107
named.rev file, 107
named server, definition of, 99
naming stations, 37
netif.options file, 46, 47, 68
netmask, setting, 45

netmask option, 45
netstat command, 70, 74
NetVisualyzer, 71
network address masks, 45
network applications planning, 28
network configurations, *sendmail*, 184
network connections, testing, 37
network controllers, choosing, 10
network daemons, 34
network equipment, planning, 8
Network File System (NFS), 95
network hardware options, 3
network hardware requirements, 1
Network Information Center (NIC), 15, 101
networking, preparing an IRIS system for, 31
network initialization, 68
network interfaces
  modifying, 46
  modifying addresses of, 48
  modifying names of, 47
network management tools, 69
network master script, 67
network parameters
  changing, 49
network performance factors, 74
network planning
  BIND, 25
  device number, 10
  electronic mail, 29
  Internet addresses, 13
  media selection, 9
  network applications, 28
  NFS, 29
  NIS, 25
  PPP, 12
  security, 28
  size considerations, 7
  SLIP, 11
  subnetworks, 25
  traffic, 10
  UUCP, 12
network script, 67
network scripts, creating, 53
network shutdown, 67, 69
Network SLIP connections (NSLIP), 93
network software, IRIS standard distribution, 4
network software checkout, 34
network software options, 5
network statistics, interpreting, 72
network troubleshooting
  configurations, 75
  hardware, 75
  media, 75
  packet size, 76
  servers, 76
newaliases program, 180
NFS
  and network planning, 29
NIS
  and network planning, 25
  and the */etc/hosts* file, 25, 36
Non-Domain Addressing, 198
nslookup command, 122

P

PC TCP/IP connections to an IRIX network, 77
performance factors (network), 74
Permissions database (UUCP), 131, 142
ping command, 37, 70, 72
planning
  for network traffic, 10
  Internet addresses, 13
  network controllers, 10

network devices, 10
network equipment, 8
network performance, 9
network size, 7
Point to Point Protocol (PPP), 79
dynamic addressing, 93
modem requirements, 82
routing, 90
Poll database (UUCP), 149
PPP
and network planning, 12
PPP (Point to Point Protocol), 79
preparing for networking, 31
primary master server, BIND, 106
primary server, BIND, 111
proclaim
client configuration, 53
description, 51
network configuration, 51
relay-agent configuration, 52
server configuration, 52

Q

queue, mail, 204

R

rarpd daemon, 69
rebooting networked stations, 46
remote access logging, 54
remote stations (UUCP)
identifying, 154
remote stations (UUCP), configuring, 158
removing stations (with BIND), 119
repeater, definition of, 8
resolv.conf file, 102
resolver routines, purpose of, 99
root.cache file, 108
route command, 71
router
configuring, 38
controlling forwarding on, 40
dual interfaces on, 38
multiple interfaces on, 39
router, definition of, 8
rpcinfo command, 70
rtquery command, 70
rup command, 37, 71
rwhod daemon, 69

S

secondary master server, BIND, 106
secondary server, BIND, 115
security
and network planning, 28
selecting network media, 9
sendmail
files and directories, 177
sendmail
and multi-token class matching, 209
command-line flags, 201
configuring, 189
design features, 174
functions of, 175
general description, 173
network configurations, 184
planning list, 188
software components, 175
sendmail.cf.auto file, 178
sendmail.cf file
configurable elements, 186

customizing examples, 190
customizing for complex relay networks, 196
customizing for relay networks, 192
customizing for simple networks, 191
customizing for standalone stations, 191
forwarder name macros and class, 187
general description, 178
killed stations class, 188
pathalias database macro, 188
relay name macro, 187
top-level domain macro, 188

sendmail command
configuration file flag, 204
daemon mode, 203
debugging flags, 203
delivery mode, 202
queue mode, 202
test mode, 203
verify mode, 203

sendmail commands, 180

sendmail daemon, 176, 180, 201

sendmail.fc file, 178

sendmail.hf file, 178

sendmail management, 201

sendmail script, 176

sendmail scripts, 176

sendmail.st file, 179

Serial Line Interface Protocol (SLIP)
and bidirectional links, 94
and data compression, 79
and file transfers, 96
and NFS, 95
debugging, 96
modem requirements, 82
modems for, 82
modems settings for, 82
purpose of, 95

Serial Line Internet Protocol (SLIP)
and network planning, 11
routing, 90

serial line networks, 2

setting network masks, 45

setup
kernel, 77

shutting down the network, 67, 69

Signal Quality Error, 75

slave mode, BIND, 107

snmpd daemon, 69

SPECTRUM, 71

spray command, 70

standalone mode, 68

standard distribution network software, 4

starting the network, 67

station naming, 37

subnetworks
and network masks, 45
and troubleshooting, 76
Internet addresses for, 26
planning, 25

Sysfiles database (UUCP), 150

system administration
documentation, xvii-xviii

Systems database (UUCP), 131, 138

T

TCP/IP connectivity to personal computers, 77

testing connectivity, 37

timed daemon, 69

timeslave daemon, 69

traceroute command, 71

transmitters, and network troubleshooting, 75

troubleshooting network hardware, 75

ttcp command, 71, 73

tunable parameters and networking, 77

U

UNIX to UNIX Copy Program, see UUCP
unknown file (UUCP), 151
/usr/bin/mailq command, 180
/usr/bin/rup command, 71
/usr/bsd/newaliases program, 180
/usr/etc/arp command, 70
/usr/etc/configmail script, 177
/usr/etc/ifconfig command, 69
/usr/etc/named.d/named.boot file, 105
/usr/etc/named.reload script, 120
/usr/etc/named.restart script, 120
