

Noirotic 1.03 for k-jofol v0.40 This package will NOT work with previous versions of K-jofol  
Copyright © 1998 Nequiem Nonsuch

#### HOW TO USE THIS SKIN:

This file either comes in a .zip for a self-extracting .zip file. unzip the file into the K-jofol skins directory. All files should be stored in a directory i.e. noirotic within the skin directory. Open K-jofol, right click and scroll down to "Change Resource File". Select the noirotic.rc file. The playlist editor can be opened by clicking on the "P" in the middle left area of the skin.

If you are intersted in making your own skins, see my tutorial at  
<http://www.angelfire/mo/nequiem/>

#### RELEASE NOTES:

##### 1.03

Made volume animation smoother. Seek areas redone so equalizer works correctly. Made green arrow in analyzer area appear to "grow" as track ends.

##### 1.02

Fixed playlist... now scrolls up and down through the full list. Added extra up/down arrows. Added rewind/fastforward buttons to skin. Increased the size of the playlist.

##### 1.00 & 1.01

This package uses jpg's and png's for the skin. This saves you about 800k and means K-jofol should run faster. For uncompressed bitmaps see my site. This skin is basically Aluminotic with modifications and new options added. Pretty much everything is self-explanatory. There are features on the skin that are not yet active. The two boxes above the question mark on the left are for dock/undock modes. The playlist will eventually have a volume function and maybe a track seek area if Ron decides to program that.

#### Author's comments:

Replacement for Aluminotic skin. For K-jofol version 0.40 \*only\*. Enjoy!
