3. HISTORY

    + New Features
    ! Improvements
    # Bug Corrections

    Faber Toys 2.4 Build 216

    [AutoRun]
        + Win.ini (load & run) support
        + HKLM_RunOnce and HKCU_RunOnce key support
        + HKLM_RunServicesOnce support
        + HKLM_InstComp key support
        + Modified date for several startup items
        + New "Run Now" menu item
        + New "Select process in Dependencies" menu item

        ! Added complete path as ToolTip for Origin column
        ! Items are now searched also in System Aliases, as Windows does

        # Files in Common Startup directory wasn't showed in 9X systems
        # 'Go To ...' function didn't work if registry path contains '{' or '}'
        # Registry items whose name contains ", \, /, :, *, ?, <, >, | wasn't saved right

    [Dependencies]
        + Added "Memory" column (NT only)
        + Retrieve Command Line of selected process
        + Process ID and Command Line shown in a TextBox
        + Possibility to kill services and system-related processes

+ Double confirmation required terminating some system-related processes
+ Autorefresh process list with custom interval
+ Services are highlighted in another color (NT only)
+ Possibility to copy in ClipBoard the path of all Processes

! Switch Priority to Normal terminating a process
! Modify Priority with a menu, not another dialog window
! Priority statements fully translatables
! &H added before Process ID hex value
! Added file size in Byte as ToolTip for Size column in Modules
! Added full parent path as ToolTip for Parent column in Processes

Process 'csrss' wasn't showed (NT only)
Cannot change priority for system-related processes
Double refresh of module list selecting an already selected process

[Dependencies & Examine File]
+ Saved filter choosen in "Save" dialog
+ Links to files added saving in HTML format
+ Can save also in XHTML format

! Added extended date as ToolTip for Date column
! Now saving in HTML 4.01 + CSS Compliant

Wrong ISO Latin character encoding saving in HTML
Error saving on a read-only file

[Examine File]
! Choosing "Details" from system menu caused to load file with
   DOS path (8.3), now with extended path
! Optimization opening multiple files from system menu
! Optimization loading MRU list

Wrong order when click on 'Hint' column header
Error examining DLL such as
   %ProgramFiles%\Microsoft Office\Office\XLCALL32.DLL
Error examining some DLL of Star Office

[Program Aliases]
+ Multiselect
+ Support for path with system variables
+ Added filter for executables in dialog used for selecting new alias
+ Aliases without '.' in name shown in gray text
+ Modified date for aliases (NT only)

! Icon was shown both in 'edit' and 'new' mode, now only in 'plain' mode

Wrong icon was shown in particular situations

[Windows Explorer]
+ Option for opening tree with single click
+ Shows if selected window is or not Unicode

! 'Refresh' button now enabled even if no valid window is selected
   in TreeView

[General]
+ New About Dialog

! Boolean values now are shown as 'Yes' and 'No', not as 'True' and 'False'
! Improved several language strings; name of languages shown depending
   OS settings
! Internal windows opened maximized
! Several Optimizations; lot of parts completely rewritten

Splash screen was maximized if program was started maximized
Run-time error when running on Korean OS
Several minor fixes
