How to?

This section explains simple tasks that make the program work. The information is divided into the following parts: data functions, search/sort/filter functions and special functions.

[Data functions](#)

[Search/sort/filter functions](#)

[Special functions](#)

[Popup Menus](#)

Program description

Primasoft Internet Organizer is presented in the form of a notebook which has two flavours: 1-Level and 2-Level format.

1-Level format has a more traditional layout where the left side of the window (Table Of Contents) lists several records and the right side displays the detailed information about a selected record. This format is suitable for more experienced users.

At first, users are more likely to choose a 2-Level format with Table Of Contents and Detail Window being two separate windows. This format more closely resembles a real book.

Program structure consists of two views:

Table of Contents

Details Page

Table of Contents:

Can be configured to display any number of any data fields in any order.

Details Page:

Each Detail Window page (or record) corresponds to one Internet location or resource. You fill in the site's name, URL, type of resource, such as a Web page or a Gopher, category of information, such as business, entertainment, arts, etc. You also can put in a detailed description of the site, plus any additional comments to help you identify it. Optionally you can include a graphical image corresponding to the site.

Entries in the notebook can be easily arranged alphabetically by any of data fields to eliminate 'information overflow'.

Every entry in the notebook is readily accessible

Upon selection expands into the full record (Details Page)

Data in the fields can be readily modified by entering values in the selected record.

Use of a broad range of controls, such as tab pages, combo boxes, calendars, and dial-out telephone access at your fingertips, makes this application not only fun to use, but also increases your productivity and reduces time spent maintaining data.

New features

Categories

define filters to display only selected categories (Business, Commerce, Science..), resource types (WWW, Gopher, News Group,...), etc.

Search

very flexible search algorithms make your searching easy

Reports

define and print a variety of reports directly from the program

Sort

sort records by different fields (by category, site name,...)

Export/Import data

export/import data to/from Ascii file;

Graphic images

capture graphic images directly from your browser

Network

the program is network aware and can be used on multi-user systems

Popular WWW browser support

PrimaSoft Internet Organizer supports the most popular browsers (automatically). When the browser is turned on, you may connect with a selected site directly from the program (Go function). Capture function allows you to create entries automatically from the Web Browser.

World's Greatest Internet Sites

As a bonus the program comes with a database containing about 300 World's Greatest Internet Sites.

PrimaSoft PC!

PrimaSoft PC, Inc., a Canadian software company, specializes in developing utility software for PC users. To date, the company has developed a number of DOS and Windows-based utility packages, such as text editors, organizers, catalogues which are currently distributed as shareware all over the world.

Over the past two years, PrimaSoft PC has designed and implemented about 25 Windows programs that are distributed as PrimaSoft Windows Collection. All programs use a book-like user interface that seems to be well received by most users, especially computer novices.

Beginning with Internet Organizer, PrimaSoft introduces a new product line based on greatly improved user interface and powerful DBase database engine (industry standard). New products should appeal to both beginners as well as sophisticated users and corporations (the software can be used in multiuser environments).

Contact information

Application screen

The main application screen contains two basic elements: the Table of Contents and the Details page. Both of these elements contain your data, but each of them presents it in a different way.

[Table of Contents](#)

[Details Page](#)

[Book models: different views of data](#)

Controls

Controls contain shortcuts to application functions and options.
The five controls used in this application are :

Main menu

Speed bar

Letter bar

Sort Bar

Header

Record Buttons

Data entry/edit elements

Data entry elements are your interface with the data. Their role is twofold: their not only display the data, but allow you to enter/modify it.

Press any of these items for more information:

[**Edit box**](#)

[**List box**](#)

[**Combo box**](#)

[**Date field**](#)

[**Numeric field**](#)

[**Graphics field**](#)

[**Multi-line edit field**](#)

[**Phone edit box**](#)

Registering with PrimaSoft PC

Choose the most convenient way to register/order the program.

1) Money Order, Check, or Cash

Please send your money order, check (drawn on Canadian or American Bank), or cash with a registration form to the following address.

PrimaSoft PC, Inc.
P.O. Box 456
Surrey, BC V3T 5B7
CANADA

2) Credit Card Orders

We accept Visa Card orders. Please send us a registration form with the card number, the cardholder name and the expiration date. You may send all this information to the address mentioned above or by:

Phone: 1-604-951-1085
Fax: 1-604-951-1085
CompuServe: 74643,2635
Internet: abrzezin@direct.ca
AOL: MKosznik
MSN: Primasoft

3) CompuServe Registration

CompuServe provides a convenient on-line registration system. Just GO SWREG and place an order. The payment will be billed to your CompuServe Statement. You will be asked for the Product Number, keep it handy.

GO SWREG
Product Number: 10640

4) INTERNET Registration Through First Virtual

You need a World-Wide Web browser.

You may visit our HOME PAGE at First Virtual directly, use address:

http://www.infohaus.com/access/by-seller/PrimaSoft_Inc

- 1) Locate the following Internet Site: <http://www.fv.com>**
- 2) Find the information on how to open a buyer's account at First Virtual (it's easy and you only do it once)**
- 3) After you have opened a buyer's account enter the First Virtual Infohouse (on-line shopping mall)**
- 4) Browse the catalog by seller and select PrimaSoft PC, Inc.**
- 5) Select the program you want and download it (just click on the icon)**

[Click here to see help on the Order Form](#)

PrimaSoft product line

Internet Book for Windows

- organize your Internet resources in one place (simpler version of PrimaSoft Internet Organizer)

Password Book for Windows

- keep track of your passwords, userIDs, etc.

Universal Phone Book for Windows

- a flexible phone book for home and business

Collectibles Catalog for Windows

- keep track of your collectibles

Plastic Book for Windows

- keep track of your "plastic" cards (e.g. credit cards etc.)

Who Is Who Book for Windows

- keep track of employees and organization members

Phone Book for Windows

- neatly organize your personal or business phone book

Daily Notes for Windows

- keep small notes organized in one place

Music Catalog for Windows

- organize your records, CDs, or cassettes

Movie Catalog for Windows

- organize your video tape collection

Car Book Plus for Windows

- keep a log of your car expenses and mileage

Contact Book Plus for Windows

- organize your personal and business contacts

Bank Book for Windows

- keep track of your bank accounts

Book Catalog for Windows

- organize your books or magazines

Calendar/Reminder for Windows

- keep track of important events and appointments

Home Inventory Book for Windows

- keep track of your home or office inventory

Software Book for Windows

- keep track of your computer software

Sport Card Catalog for Windows

- organize your sport card collection

Coin Catalog for Windows

- organize your coin collection

Hardware Catalog for Windows

- keep track of your computer hardware

Stamp Catalog for Windows

- organize your stamp collection

Student Organizer for Windows

- keep track of your courses and school related info

Wine Cellar Book for Windows

- organize your wine collection

Sources of PrimaSoft PC programs

1) Internet

To find our products on the Internet:

Connect with our Home Page at First Virtual :

http://www.infohaus.com/access/by-seller/PrimaSoft_Inc

Connect with our Home Page at AOL :

<http://members.aol.com/MKosznik/primasft.htm>

2) Compuserve

To find our products on Compuserve:

Go WINPROD and do search by contributor id:74643,2635

Go WINSHARE and do search by contributor id:74643,2635

Go WUGNET and do search by contributor id:74643,2635

3) Microsoft Network

On the Microsoft Network do:

Select Edit/Go To/Other Location menu function. Then type in Primasoft and click on the OK button.

4) America Online

To find our products on AOL:

Use the KEYWORD function (under GO TO menu item).

Enter the keyword "WINDOWS FORUM" or "WIN", which will take you to the main menu of the Windows Forum. Click on the Software Libraries button on that screen; on the next screen select the Software Search button. On the resulting search form just type PRIMASOFT in the search box, press <ENTER> and the file names will come up on a list.

[Why are my DBF, DBT and MDX files so big?](#)

[I switched to multi-user system and I can not return to single-user system.](#)

[What should I do?](#)

What is shareware?

Shareware is a marketing method of computer software in which the user has a chance to try the software before buying it (Try-Before-You-Buy). The user can freely copy the shareware version of the program and install it on his/her computer. After the evaluation period (typically about 4 weeks), if the user decides that he/she likes the program and wants to use it, he/she should register the program by sending the registration fee to the program author.

How to: data functions

'Data you need!'

Data functions help maintain your data.

As the main purpose of this application is to store and maintain your data, and then have it available at your fingertips, read more about these functions here:

[Adding a new record](#)

[Modifying an existing record](#)

[Deleting an existing record](#)

How to: search, sort and filter functions

'Data you need in the format you like!'

Search, sort and filter functions help you locate and extract data from your file quickly and efficiently.

[Searching for data](#)

[Sorting records](#)

[Filtering: selecting records that meet your criteria](#)

How to: special functions

'Data you need in the format you like and ... more!'

This section describes important functions that help maintaining your application, exchange information with other applications, and set your personal preferences.

[Print functions](#)

[Import data](#)

[Export data](#)

[Password set/modify](#)

[Maintenance functions](#)

[User preferences/options](#)

Add (create) new records

There are 3 ways of entering the data in this application: manual entry, copy and paste method, and importing data from other sources.

[**Adding new records by manual data entry**](#)

[**Copy and Paste**](#)

[**Import data from other sources**](#)

Modify records

To make changes to a record in the Table of Contents:

Locate the record and click on it.

If the book model is 2-level, you will be transferred to the Details Page.

In the Details Page, simply make changes you like to any fields in this record.

[Undo changes to the record](#)

[Multi-user applications](#)

Delete records

Records of data can be permanently removed from the data file using the 'Delete' function. This function can be accessed from the Speed Bar at the bottom of the Details Page, from the Details Page Popup Menu, and from the Record Button Popup Menu.

How to delete a record:

Select the record you would like to delete.

Press the 'Delete' button, or select the 'Delete' item from the Popup Menu.

Type in 'Yes' in the confirmation dialog box. Pressing 'Cancel' will abort the deletion.

Note: the deletion process can not be undone!

Pressing 'Cancel' aborts the deletion process.

If you do not want the confirmation dialog box to be displayed before the deletion you can change set the Immediate Delete Option (see Options).

[See also: multi-user applications](#)

Search

What is search?

The 'Search' function helps you to locate the record(s) that contain the piece of data you are looking for. With this application, you are able to locate a piece of text in any field in the data file, with the capability of moving to the next record(s) filling you search criteria.

Where is the search?

The 'Search' function can be accessed from the 'Search|Find' option on the main menu, and in the speed bar (Standard Section - 'Find' button).

How to search?

When in the 'Search' dialog:

- select the field to be searched (notice the 'All fields' option!)
- select the 'Start from' (beginning or end)
- input the text to search for (note the previous entries)
- press the 'Find' button to activate search

What is the result of search?

The 'Search' function positions you in the first record that matches your search criteria. Use the 'Find next' button to go to next records that contain the text searched for.

What is the result of search when the "Non-Stop Search Mode" option is marked ?

The program goes through entire database looking for records that match search criteria. When the search is finished ONLY those records are displayed that contain the text. In order to return to All-Records-Display set the Filter Scope option to All Records (in the Filter dialog box), or select All Records in The Filter Button Popup Menu.

Sort

What is sort?

To sort records means to change the order the records are displayed in. The underlying data structure of the file remain the same: only the way data is being displayed changes.

Two kinds of sort

This application uses one-level and two-level sort, depending on the number of fields specified in the 'Sort by' option.

One-level sort

One-level sort is sorting records by one field only.

For example:

Sort by 'Date' arranges records in ascending or descending order by the 'Date' field.

Two-level sort

Two-level sort is sorting data records by two fields at the same time. One field becomes the primary sort field, with another becoming the secondary sort field. The result is records ordered by the primary sort field, and within that order by the secondary field.

For example:

'Last name' primary sort field, 'First name' secondary sort field

All the records will be arranged alphabetically by the 'Last name'. Within that, all the records with the same 'Last names' will be further arranged by the 'First name'.

Where is sort?

The 'Sort' function can be accessed from the 'Advanced/Sort' option on the main menu, and from the speed bar (advanced section), at the bottom of the screen. However, the fastest access to sort options is from the Sort Bar displayed at the top of the Table Of Contents (above Record Buttons).

What is the result of sort?

Sort results in data records alphabetically arranged in user selected order.

Note: Primary and secondary sort fields are also being displayed as buttons above the Table of Contents. Pressing on these buttons also activates the 'Sort' function.

See also:

[Sort Bar](#)
[Controls](#)

Filter

What is filtering?

Filtering is a method of limiting the number of record displayed to a certain range. A filter specifies the criteria for the process.

A filtering example: list me all the records with the value of the 'Date' field greater than '01/01/1992'.

Kinds of filters.

A filter can specify criteria for one or more fields in the record. The more criteria for the filter you specify, the better chance of obtaining the range of records that interest you.

How to access the 'Filter' function?

The 'Filter' function can be located in the 'Filter' option on the 'Advanced|Filter' option on the main menu, and in the speed bar (advanced section), at the bottom of the screen. However, the fastest access to filter options is from the Sort Bar displayed at the top of the Table Of Contents (above Record Buttons).

How to filter?

When in the 'Set filter' form:

Select fields to be used in the filter (the box on the right) from the fields list on the left.

Value for each field used in the filter can be specified using the 'Edit' button below.

[See: Set filter on a field](#)

Use the 'Scope' selection to specify the filter kind:

- All records: display all records (clear the filter results)
- Normal filter: use the filter as is
- Reversed filter: reverse the action of the filter

Press the 'Apply' button to see the effects of your filter settings.

The result

Filtering results in a range of records that meet your criteria specified in the filter dialog box.

Load filter

Retrieve a previously saved filter from a filter template file.

Save filter

Save current filter in a filter template file.

[Report title](#)

[Print this report](#)

[Preview this report](#)

[Load saved report](#)

[Save this report](#)

Import

What is importing data?

Importing data is another option of adding records to this application. You can import data from text files that have the following characteristics:

fields have to be separated from each other by: tabs, commas or another user defined character

fields have to be delimited by: commas, quotes or another user defined character

How to find Import?

The 'Import' function can be accessed in two ways:

1) from the 'Advanced' section on the speed bar: the 'Import' button

2) from the 'Advanced' section on the main menu: the 'Import' option

How to use Import?

When in the 'Import Options' screen:

select the 'Fields separated by' option and 'Fields delimited by' option

Below:

the left list box contains all the fields that build the application's data file

the list box on the right side contains fields that make a structure of the data file that is the import source (from which the data will be imported into the application)

select field(s) from the right list box, and use the button with one green arrow to add selected field(s) to the import source

use the button with green arrows to add all the fields to the import source

select field(s) from the import source, and use the button with one red arrow to remove selected field(s) from the import source

use the button with red arrows to remove all the fields from the import source

when the structure of the source data file is complete, press 'OK' to continue the data import ('Cancel' will abort the import process)

select the import source file in the 'Enter/Select Import File Name' dialog box and press 'OK' to continue ('Cancel' will abort the import process)

The result

The import process completes: the result is application data file created by importing data that existed in the import file. You can use the new data in this application.

Export

What is exporting data?

Exporting data is another option of adding records to this application.
You can export data to text files; data fields will be:

separated from each other by: tabs, commas or another user defined character

delimited by: commas, quotes or another user defined character

How to find Export?

The 'Export' function can be accessed in two ways:

1) from the 'Advanced' section on the speed bar: the 'Export' button

2) from the 'Advanced' section on the main menu: the 'Export' option

How to use Export?

When in the 'Export Options' screen:

select the 'Fields separated by' option and 'Fields delimited by' option

Below,

the left list box contains all the fields that build the application's data file

the list box on the right side contains fields that make a structure of the data file that is the export destination (to which the data will be exported from the application)

select field(s) from the 'All fields' list box, and use the button with one green arrow to add selected field(s) to fields included in export

use the button with green arrows to include all the fields to export

select field(s) from the 'Fields included', and use the button with one red arrow to exclude selected field(s) from export

use the button with red arrows to exclude all the fields from export

when the structure of the destination data file is complete, press 'OK' to continue the data export ('Cancel' will abort the export process)

select the export destination file in the 'Enter/Select Export File Name' dialog box and press 'OK' to continue ('Cancel' will abort the export process)

The result

A data file containing fields selected in the 'Export Options' screen.

Password

Why set password?

Setting a password on this application is a measure of security. When you protect your application with a password, only those who know the password will be able to access your data.

Where to find password functions?

The 'Password' function can be found in the 'Advanced|Password' option on the main menu, as well as in the advanced section of the speed bar at the bottom of the screen.

How to set/modify password?

When in the 'Password Dialog':

enter your old password into the field provided, press 'OK' to continue

This serves to verify that you are authorized to change the password.

enter the new password in the second dialog box, press 'OK' to continue

verify the new password by typing it in again, press 'OK' to complete the 'Set/modify password' process

pressing 'Cancel' at any time aborts the process

The result

The new password is effective immediately after you have set or changed it. Use your new password next time you start this application.

Important

In order to activate the Password system select Password Required in Options/Security. In a multi-user system only the Supervisor can access Options/Security settings.

Options (preferences)

What does it do?

This application can be customized to suite your needs and preferences.

How to find preferences?

User preferences can be accessed through the 'Options' function on the main menu at the top of the screen.

How to set preferences?

Use pages in the 'Options' dialog box to customize the application, and set important system functions.

[User interface](#)

[Modem](#)

[Data](#)

[Colors](#)

[Security](#)

[Users](#)

Table of Contents

What is it?

Table of Contents' purpose is to display a record list in a notebook format, making it a general purpose viewing tool. From here, you can browse through records, sort them, filter the records you like or don't like arranging them the way you like.

How to get there?

Most of the time, the Table of Contents is clearly visible on the application screen.

However, if you select the 2-level Book model, and you are in the Details Page, use the Main menu|File|Table of Contents option to return to the Table of Contents.

[See also: Book models.](#)

Details Page

What is it?

Details Page displays all the data in the record selected from the Table of Contents. Data is displayed in fields, and can be modified by changing the information in them.

This page is arranged in four parts. Each part displays one or more fields in the same data record. Use tabs at the bottom of the Details Page to access any of its parts.

Details Page have the following functions (listed in the Details Page Speed Bar section or in the Details Page Popup Menu section):

[Go To Web Page](#)

[Capture Web Page](#)

[View Copy Buffer](#)

[Paste Record](#)

[Copy Record](#)

[Undo Changes](#)

[Delete Record](#)

[Print Record](#)

[Synchronize](#)

Book models: different views of your data

What is a book model used for?

Book models represent two different ways you are able to view your data. Use one book model if you want to view just the Table of Contents, only the Detail Page, and another model to view both of them at once. Therefore, we have 1-level and 2-level Book Models.

1-level Book Model

This book model displays both Table of Contents and Details Page at once. Table of Contents is displayed to the left, and the Details Page on the right. The advantage of this model is simultaneous access to record details while browsing through the Table of Contents. Every time you select a record in the Table of Contents, the Details Page displays the full record.

2-level Book Model

This model displays either Table of Contents or Details Page, with any of them taking the full application display at any given time. The advantage of this model is access to more records at once, whether in general view (Table of Contents) or detail view (Details Page).

Main menu

The Main menu allows for quick access to important functions.

Click on any of the following functions for more information:

[File](#)

[Search](#)

[Options](#)

[Move](#)

[Advanced](#)

Speed bar

What is it?

The Speed Bar is a shortcut to application functions.

Its panel is divided into two sections: Basic Command Section and Advanced Command Section.

How to find it?

Speed Bar is displayed at the bottom (or top) part of the program window.

How to use it?

Press buttons on the Speed Bar panel to execute functions.

Letter bar

What is it?

The Letter bar is a shortcut to filtering records alphabetically. The records are filtered into separate letters according to the first letters of Primary Sort Field data. Letter Bar is displayed in the middle of the application window (you can also have it displayed at the right window edge - see Options). The Letter Bar contains letter buttons (A-Z). The letters that are displayed in Red (default) color signal the presence of records. Black (default) color on the other hand marks 'empty letters'. The Yellow (default) color letter (also pushed down) marks the currently selected letter for which records are displayed. You can change the Letter Bar colors in Options/Colors. You can also disable Letter Bar in Options. When the Primary Sort Field is not a text field (e.g. ENTRY ORDER or Date Field) the Letter Bar becomes inactive automatically.

How to use it?

Press on a letter in the bar to see all the records which primary sort field starts with that letter of the alphabet.

See also:

[Sort](#)
[Options](#)

Edit box

Edit boxes are controls that accept text. Characters typed in can be alphanumeric (letters of alphabet and numbers); they also accept 'special characters' like: quotes, exclamation marks, percent signs, asterisks, etc.

List box

List boxes display a scrollable list of items that you can select but cannot directly modify.

Combo box

A combo box is a control that combines an edit box with a list, much like that of a list box. Users can either type text in the edit box or select an item from the list.

Date field

Date field is a variation of an edit box that displays and accepts date values in different formats. Enter a date using numeric keys on the keyboard. Clicking on the '...' button of the date field, displays a small calendar, from which you can select a date. The date will be automatically entered as a text in the date field.

Date format for the application can be set from the 'Options' function on the main menu.

[See: Options function on the Main menu](#)

Numeric field

Numeric fields are variations of edit boxes, and accept numerical data only. Use numerical keys on the keyboard to manually enter data into the numeric field. Pressing on the '...' button of the numeric field displays a small keypad. Use keypad buttons to enter value in the field. Press the 'Checkmark' button to accept the entry, the 'Cancel' button aborts the data entry and closes the keypad.

Purpose of Internet Organizer

PrimaSoft Internet Organizer is an information manager that lets you easily keep track of all your favorite places to visit on the Net.

Application data is stored in a file on a hard disk, and can be accessed by one or many users simultaneously.

The program organizes the data efficiently, so that the information is readily accessible in a variety of ways.

Implementation of powerful search, sort and filter algorithms allows to present the data you need in the format you want.

Flexible import/export functions allow the exchange of data between many applications.

Options Pop-up Menu

This pop-up menu is invoked by a right mouse button click on the empty space around the Table of Contents or SpeedBar.

Options on the menu:

Book Models

[See: Book models](#)

Menus and SpeedBars

Select menu and speedbar views and positions.

Letter Tabs

Select letter tab view and positions.

Hint Messages

Choose whether to display yellow hint messages when the mouse cursor enters an area on the application screen.

Record Delete Mode

Select if you would like a confirmation before you try to delete a record.

Details Page Pop-up Menu

This pop-up menu is invoked by a right mouse button click on the empty space around data entry elements of the Details Page.

Options on the menu

[Go To Web Page](#)

[Capture Web Page](#)

[View Copy Buffer](#)

[Paste Record](#)

[Copy Record](#)

[Undo Changes](#)

[Delete Record](#)

[Print Record](#)

[Synchronize](#)

Manual data entry

To create a new data record manually:

Press the 'New' button on the 'Standard' section of the speed bar (positioned below the Table of Contents or below the Details Page), or select File/New Record from the application menu.

A new record will be prepared for data entry, you will be positioned in the Details Page.

Simply enter your data in the fields on the Details Page.

Note: some fields in the record may be 'required'. This means that they can NOT be left blank - you must put some data there. These required fields are of a different color.

[See also: data entry elements](#)

Copy and Paste

Using the 'Copy and Paste' utility will help you create new records by duplicating existing records.

To duplicate the selected record:

1) position yourself in the Table of Contents

2) use the right mouse button to invoke the pop-up menu

3) from the pop-up menu, select 'Copy Record'

4) click on an empty record in the Table of Contents

5) use the right-click on that empty record to invoke the pop-up menu again

6) select 'Paste Record' from the pop-up menu

Result:

An identical copy of the original record was created, and appended to the database.

Saving changes

Any changes to a record will be automatically saved when moving to another record, or performing a function (filter, sort, etc.).

Undo changes

This feature lets you undo the most recent changes to a record. Use the 'Undo' button located at the bottom of the Details Page or select the Undo item from the Details Page Popup Menu.

Multi-user applications

Make sure that you have read/write access to the record you wish to make changes to. Only one user is allowed to make changes to a given record at the same time.

Only user who has userID of "Supervisor" can modify user accounts. Every user has his own private directory where his private databases are stored. Nobody else can access the user's private data. The Supervisor's private directory serves at the same time as a public directory. All users can access public directory (unless the Supervisor revokes their access privilege).

Also see:

[Options](#)

Report fields

Use green arrow buttons to include fields in the report.

Use red arrow buttons to remove fields from the report.

Two buttons below the 'Included fields' list box change included fields' position in the report.

Report options

Select whether to print field names.
Specify record layout.
Table grid print option.
Total options.

Report fonts

Select a font to be used later when printing the report.

Report page

Set report page parameters (margins, page size, and page orientation).

Report title

Enter a title for your report, and set title options.

Print this report

This function prints the currently selected report on the default printer.

Preview this report

This functions lets you preview the currently selected report on the screen before printing.

The Preview Window allows viewing different report pages, zooming the displayed report, and printing it on your printer.

Also see:

[Print functions](#)

Load report

What does it do?

This function will help you select and retrieve a previously saved report.

Also see:

[Print functions](#)

Save this report

Your report parameters can be permanently saved to disk, and retrieved later.

Reindex database

What does that mean?

This option repairs indexes on your database.

It is mainly used when troubleshooting your application, in case your data files become corrupt.

Delete indexes

What does it mean?

This function deletes indexes in your database.

It is mainly used when troubleshooting your application, in case your index files become corrupt.

Pack database

What does it mean?

When deleting records from your data files, they are not physically erased. Use the 'Pack database' function periodically to reclaim disk space after deleting records.

Delete all records

What does it mean?

This function will delete all the records from your database, and therefore empty it completely!

Repair data file

What does it mean?

This function will repair a damaged data file.

Sometimes your memo fields (those containing images or binary data) get corrupt, which results in impropotional file size increase.

Use this function to correct this problem.

Backup

It is important to back up your data!

By backing up, you preserve an extra copy of your data, that can be always restored in case of a major mishap or a system crash.

Restoring data from backup

What does that mean?

If you have backed up your data, it can be restored from the backup directory into your data directory.

Note that the restoring process will overwrite all your existing data in the data directory!

Edit lists

What does it mean?

Lists are stored choices you can pick from combo-box data entry elements in the application.

By using this function, you can modify contents of these lists:

select a list

add/edit/delete items in the list

By clicking on Update Lists button you can update all lists from the current database. This can be a time-consuming process and it is only necessary after you Import data from an external source (Import function).

User interface

What is it?

User interface is the application means through which you interact with computer.
Select your user interface preferences.

See also (Interface elements that you may display/hide/move):

[Book Models](#)

[Main Menu](#)

[Speed Bar](#)

[Letter Bar](#)

Modem

What is a modem?

A modem will enable your computer to access various services through a regular telephone line.

Some examples of services:

Internet

CompuServe/America Online/Prodigy, etc.

Dialing telephone numbers for you...

Modem setup

A modem will use a communication (COM) port in your computer. Select a COM port your modem is using.

Data

What does this do?

This function sets some options related to your data:

Initial Data File - which database is loaded on start-up;

Date Format - how date is displayed in Date Fields and printed on reports;

Labels - names used for data fields; by changing the labels you can change the meaning of data fields; you can also define the meaning of User Fields.

How to get there?

From the Options form, select the 'Data' tab.

Colors

What does it do?

This function sets colors for your application.
Select an element from the elements list, and pick a color.

Color templates

Your favorite color settings can be saved in templates. These templates can be later retrieved and activated.

Save template:

Saves your current color settings

Load template:

Loads a previously saved color template

Security

What does it mean?

This function specifies password use, file access rights, and application data root directory.

How to use it?

Change the options to Multi-User System (only if your Single-User option is selected).

Select whether you wish to password protect this application

Set public file access rights

Select data root directory

Users

What does it do?

This options specify whether the application will be used by one person, or many users at a time.

How to use it?

For multi-user access specify user accounts:

Add/edit/delete application users

Modify user status

Grant and deny public files access rights depending on user function

See also:

[Multi-user](#)

[User Accounts](#)

View copy buffer

What is it?

Copy buffer is temporary storage to which a record is being copied when using the Copy Record function. Later you can Paste the record from the copy buffer.

This function will display data in the Copy Buffer.

Paste record

What does it do?

Paste data from the Copy Buffer into the current record. You have to use Copy Record function before you can use Paste Record.

Copy record

What does it do?

Copy data from the selected record into the Copy Buffer. Later on, the data can be pasted into a new record.

Print record

What does it do?

This function will print current record's data to the default printer.

Synchronize Table of Contents

What does it do?

Synchronize the Table of Contents with the current record in the Details Page.

Capture Web page

What does it do?

Capture the screen image from a World Wide Web page currently selected in your Web browser.

Note: this function requires your Web page browser be turned on.

Also see:

[Currently Supported Web Browsers](#)

Go to Web page

What does it do?

Sets your Web browser to activate the World Wide Web page address from the selected record. This function may be invoked from the Details Page (Speed Bar, Popup Menu), or from the Record Button Popup Menu.

Note: this function requires your Web page browser be turned on.

Also see:

[Currently Supported Web Browsers](#)

Main menu: File

This Main menu item displays a sub-menu of the following choices:

[New record](#)

[Load database](#)

[Print](#)

[Table of Contents](#)

[Exit](#)

New record

What does it do?

This function inserts a new data record into the active database.

How to get there?

From the Main menu at the top of the screen, select File, then New record.

Load database

What does it do?

This function loads a new database to be used by this application.
A database is a collection of data files permanently stored on a hard disk.

Your data can be spread across separate databases. For example, Internet links with similar topics can be stored in one database, using one database for topic. You assign name and description for your databases, so that later on you can select the one you want by using the 'Load database' function.

How to get there?

From the Main menu at the top of the screen: select File, then Load database.

Additional topics:

[New database](#)

[Edit database](#)

Exit

What does it do?

This function closes the application. All the data will automatically be saved.

Moving functions

What are they for?

These functions will help you navigate through your data:

First

Moves to the first record.

Page Up

Moves one set of records (page) up.

Page Down

Moves one set of records (page) down.

Last

Moves to the last record.

Shortcut keys

What does it do?

Shortcut key sequences provide fast function access through combinations of keystrokes.

Edit filter for a field

What does it mean?

This function will allow you to edit filter settings that will apply to a field.

How to get there?

Find this function on the Filter dialog box.

How to use it?

When in the 'Filter for:' dialog box:

Select your criteria from the 'Is' list

Type in a value corresponding to your criteria selection

Free software offer!

When you register PrimaSoft Internet Organizer you will receive:

a free copy of our Password Book (a value of \$15)

this little program can be very helpful in keeping track of your passwords, userIDs, access codes, etc.

This is a time limited offer so act now and register [PrimaSoft Internet Organizer!](#)

What happens after I register?

After you register PrimaSoft software you will receive diskettes with the registered version of the program. The registered version is functionally identical to the shareware version but the Registration Reminder screen is no longer displayed and the program is not time-limited. We will always send you the latest version of the program. If you register on-line on the Internet through one of our on-line stores you will be able to download the registered version of the program - in this case we will not send you diskettes by mail.

Can I safely enter my data into the shareware version(s) of your program(s)?

Yes, absolutely. To be on the safe side, however, you should backup your data every once in a while.

Also see:

[How to use backup and restore functions?](#)

What are the differences between the shareware and registered versions of your software?

Assuming you have the latest shareware version of our software there are no functional differences between the Shareware and Registered versions. The Registered version will not display the Registration Reminder screens and is not time-limited. Registered users are entitled to unlimited number of free upgrades.

Is there a printed manual included with your registered version?

No, we don't include any printed documentation. You will only receive a short letter with Installation instructions. If you have problems using our software try reading help messages. Once you learn how to use one of our programs you should have no trouble using all our other programs.

Can I register using my credit card?

You can register over the phone, through on-line systems (Compuserve, AOL, Internet, MSN), or regular mail using your VISA Card.

IMPORTANT: For those who want to send us an order form as an e-mail with the attached encrypted file (order form file). Do it in the following way:

From INTERNET - then send to our INTERNET address.

From COMPUSERVE - then send to our COMPUSERVE address.

From America OnLine - then send to our America OnLine address.

From Microsoft Network - then send to our Microsoft network address.

Files Attached to e-mail messages are not preserved when the source and the destination are not on the same on-line system.

Where can I find the shareware versions of all your programs?

PrimaSoft products can be located on:

COMPUSERVE:

the best place to look for our software is WinProd Forum, and WinShare Forum; just GO WINPROD or GO WUGNET and do a Search by Contributor on 74643,2635;

AMERICA ONLINE:

use the KEYWORD function (under GO TO menu item). Enter the keyword "SOFTWARE", which will take you to the main menu of the Software Computing Forum. Click on the Software Search button. On the resulting search form just type PRIMASOFT in the search box, press <ENTER> and the file names will come up on a list.

MICROSOFT NETWORK:

after you log in onto Microsoft Network select Edit/Go To/Other Location menu function. Then type in Primasoft and click on the OK button.

- on the Internet you can find our programs on a number of "anonymous" ftp sites e.g. oak.oakland.edu, ftp.cica.indiana.edu, garbo.uwasa.fi, ftp.fv.com, etc. Look for the files that start with "am_" and have a ".zip" ending.

INTERNET (for those with Internet WWW browsers):

1)Our WWW Home Page at AOL: <http://members.aol.com/MKosznik/primasft.htm>

2)Our WWW Home Page at First Virtual:
http://www.infohaus.com/access/by-seller/PrimaSoft_Inc

3)Our WWW Home Page at
CompuServe:<http://ourworld.compuserve.com:80/homepages/primasoft>

How can I learn about new versions of your software?

You should visit one of our Web Pages on regular basis. Our Web Pages are the first palce where new releases of our software are be announced.

[Location of PrimaSoft home pages on WWW](#)

What language is your software written in?

Our software is written in Borland's Delphi and it uses Borland's DBase database engine.

How to use backup and restore functions?

It is always good to backup your data on regular basis e.g. once a week or once a month. You should especially do a backup after entering many new records. When you do a Backup the following data files are copied to DATA\BACKUP directory: DATA.DBF and DATA.DBT (this is assuming that you have Loaded DATA.DBF file). DATA directory is located underneath your main program directory. Once you do a backup to your DATA\BACKUP directory you should compress the above files (e.g. using PKZip program and copy the compressed file to some backup media e.g. diskette or backup tape). You can also use backup software to do it.

Why are my DBF, DBT and MDX files so big?

MDX files store your database indexes and can grow substantially overtime if you have used many different orderings and filters. You can trim the MDX file by using Delete Indexes function in Maintenance.

DBF files contain the main portion of your data. After a long-time usage many deleted records can accumulate. The deleted records are not displayed but they occupy your disk space. You can remove those deleted records by using Pack Database function in Maintenance.

DBT files store both Multi-line text and graphics and they can take a lot of space (especially graphics). DBT files should be much smaller if you use 16 color graphic images as opposed to 256 or more. Still when you think your DBT file is too large you can try Repair Data File function in Maintenance (or Backup followed by Restore). DBT files can become corrupted in some rare situations, and you should use Repair Data File function in such circumstances.

I switched to multi-user system and I can not return to single-user system. What should I do?

Enter "Supervisor" as UserID in the Login screen and leave Password field blank. Then change the Options to Single-User system.

Order form

To serve you better, we request that you fill this form and mail it to us with your payment.

When you give us information about yourself (your name and how to contact you), we will send you upcoming program updates, and notify about exciting new products that we develop.

Name

Enter the name of the person or company you wish the software to be licensed to.

Address1-Address5

Enter the mailing address here.

Telephone number

Enter the phone number with the applicable area code.

E-Mail address

Enter your Internet email address.

Source

We are interested about the place you have received our software from. Select one of the values in the list, or write your own source.

Comments and Suggestions

In the never-ending quest for perfection, we keep on constantly revising and updating our software. Send us your comments, and help us achieve our goals!

Payment form

Select a method of payment from the drop-down list.

VISA card number and expiration date

This part applies only if you have selected option "VISA" above.

Program version

Program version will depend on your operating system. This application requires Microsoft Windows (TM).

- use 16-bit version if you have Windows 3.x, but not Windows 95 or Windows NT (16-bit version will work under Windows 95 or NT, but we do not recommend that)

- use 32-bit version if you have Windows 95 or Windows NT only (32-bit version will not run under Windows 3.x)

License type

Select a license that applies to your use:

- single user: if you plan to use this application by yourself
- multi-user: if there will be more than one person using this program
- unlimited: no limit on the number of users for this application

Number of users

Enter the number of users that will be using this software.

Price

This price depends on the program version, license type and number of users you entered above.

Shipping and handling

This nominal fee covers our material and mailing costs.

Total price (US Dollars/Canadian Dollars)

This is the total price for this product. Select the currency that applies, depending on the country you live.

New database

What does it do?

This function will create a new, empty database.

Enter a name for the new database, and a short description. A file name that appears below will be the data file in which the database will be stored on disk.

How to get there?

Use the File|Load database function to load the database. Then, select New to use this function.

Edit database

What does it do?

This function will edit information about the currently selected database. Modify database name and description.

How to get there?

Use the File|Load database function to load the database. Then, select Edit to use this function.

Multi-line edit field

This field allows entering multiple lines of text up to about 64KB in size. The fields Popup Menu has the following functions:

- Undo: undoes the last edit operation;
- Cut: cuts the selected block of text to the Windows Clipboard;
- Copy: copies text from the field to the Windows Clipboard;
- Paste: pastes text from the Windows Clipboard to the edit field (text is inserted at the current cursor position);
- Delete: deletes the selected block of text;
- Select All: selects entire text in the field;
- Load: loads text from a disk file into the field;
- Save: saves the contents of the field in a disk file.

Graphic field

This data field stores graphical images. There are 2 types of Graphic Field: Large and Small. The Large Graphic Field allows storing any size images. It also has a Speed Bar with the function buttons at the bottom. The Small Graphic Field does not have the Speed Bar. It also cannot store images larger than its size (larger images will be resized automatically to fit in the field). Both types of Graphic Field have a Popup Menu with the following functions:

- Clear: clears the image;
- Load: loads the image from a disk file (BMP format only);
- Save: saves the image to a disk file (in a BMP format);
- Zoom: zooms in and out the image for better viewing (available only in Large Fields);
- Screen Capture: allows capturing a selected screen area into the field;
- Copy: copies the image to the Windows Clipboard;
- Paste: pastes the image from the Windows Clipboard into the field.

Sort Bar

Sort Bar consists of the following 3 buttons:

- Primary Sort Field: displays the name of the data field used as a Primary Sort Field; if a Text Field is selected as a Primary Sort Field the Letter Bar is enabled and the records are automatically separated according to the first letter of the Primary Sort Field;
- Secondary Sort Field: displays the name of the data field used as a Secondary Sort Field; if the Primary Sort Field is ENTRY ORDER the Secondary Sort Field is disabled; if both Primary and Secondary Sort Fields are text fields they both must have the same Sort Direction (Ascending or Descending);
- Filter Button: displays the current Filter Status:
 - All Records: filter is not active and all records are displayed;
 - Normal Filter: filter is active and records that satisfy the filter are displayed;
 - Reversed Filter: filter is active and records that do not satisfy the filter are displayed;

Clicking on Primary or Secondary Sort Field with the left-mouse button displays the Sort Dialog Box where the user can change the sort options. A faster way to change the sort options is to use Popup Menus of Sort Buttons.

Clicking on Filter Button displays the Filter dialog box where the user can create or modify a filter. The Filter Button Popup Menu contains the following functions:

- All Records: deactivates the current filter (all records are displayed);
- Normal Filter: activates the Normal Filter option (see above);
- Reversed Filter: activates the Reversed Filter option (see above);
- Load From Template: allows the user to quickly load a previously Saved filter;
- Save As Template: allows the user to save the current filter in a template for future use;
- Delete Template: removes the selected template from the list of filter templates.

Header

<i>Date:</i>	<i>Title:</i>	<i>Category 1:</i>
--------------	---------------	--------------------

Header displays the Names of the data fields that are displayed underneath on Record Buttons. Header controls which fields are displayed and in what order as well as the width of each field. The user can change the order by dragging and dropping the field names on the Header. The widths can be changed by dragging the dividing lines on the Header. The Header Popup Menu contains the following functions:

- Insert Field: inserts a data field into the Header (and Record Buttons);
- Remove Field: removes a data field from the Header (and Record Buttons);
- Load From Template: allows the user to quickly load a Header layout previously Saved;
- Save As Template: allows the user to save the current Header layout in a template for future use;
- Delete Template: removes the selected template from the list of header templates.

Also see:

[Popup Menus](#)

[Record Buttons](#)

Record Button

Record Buttons are displayed in the Table Of Contents. In essence, record buttons give you a quick view of a certain number of records at once. In 1-Level Book Model you can see 12 record buttons while in 2-Level Book Model you can see 24 record buttons.

Record Buttons are controlled by the Header which determines which data fields are displayed, in which order, and how wide each field is. Multi-line edit fields and graphic fields cannot be displayed on record buttons.

Clicking on a Record Button results in the selection of the record. Details Page for the selected record is displayed.

Record buttons have the following Popup Menu functions:

[Go To Web Page](#)

[Capture Web Page](#)

[Quick View](#)

[View Copy Buffer](#)

[Paste Record](#)

[Copy Record](#)

[Delete Record](#)

[Print Record](#)

See also:

[Header](#)

[Popup Menus](#)

Popup Menu

Popup Menus give the user a fast way to access many different functions. Many controls e.g. Header, Record Button, Sort Bar have their own Popup Menus with functions specific for given control.

Use Right Mouse Button to display Popup Menus.

Also see:

[Header](#)

[Sort Bar](#)

[Record Button](#)

Quick View

What is it?

Quick View gives you a fast view of the selected record directly from the Record Button without having to actually make the record active.

Also see:

[Record Button](#)

Load Colors Template

What does it do?

This function will help you select and retrieve a previously saved colors template.

Load Filter Template

What does it do?

This function will help you select and retrieve a previously saved Filter Template.

User Accounts

[This information applies only to Multi-user Systems.](#)

Only the Supervisor can add, delete and modify user accounts.

Also see:

[Edit User Account](#)

Edit User Account

This information applies only to Multi-user Systems.

Only the Supervisor can add, delete and modify user accounts.

Every user has:

- Name - used only for reference;

- User ID - used during the Login process; cannot be changed by the user;

- Password - used during the Login process; can be changed by the user.

The Supervisor can control every user's Access Rights to the Public Databases. The user can also be temporarily locked out of the system by the Supervisor (Current Status = Not Active).

Phone Edit Box

This is a special type of Edit Box. When you click on the '...' button the Dial dialog box will be displayed. If your computer is equipped with a modem you can dial the number that is contained in the Phone Edit Box (or any other number). In order for the Dial function to work your modem COM Port must be selected in Options/Modem.

[Also see: Modem](#)

Supported Web Browsers

PrimaSoft Internet Organizer currently supports the following Web Browsers:

- Netscape Navigator 2.0 and all older versions;
- Microsoft Internet Explorer 2.0 and all older versions;
- NCSA Mosaic 2.0;
- Spry Mosaic - Compuserve Edition;
- America Online Web Browser.

We will continue to support all major browsers as new browser versions become available. Stay tuned for future releases of PrimaSoft Internet Organizer. Any new versions will be announced on our Web Home Page.

Data Root Directory

You should avoid changing the Data Root Directory unless you really have to do it!

Typically, you might need to change the Data Root Directory on a network. It is the user's responsibility to move all data directories to the new location. As a default, the Data Root Directory is set to the Internet Organizer home directory. If you change the Data Root Directory all directories (with their contents) underneath the Data Root Directory must be moved to the new location. Typically, the directories that need to be moved will have names:

DATA, DATA0001, DATA0002, etc.

Also see:

[Multi-user system](#)
