Introduction

Welcome to Gemstorm!

The storm has come, and with it come falling Gems. Your job is to keep the Gems from filling up the land.

[Click here to find out how.](#)

How To Play

The idea of the game is to line up enough Gems of the same color in a row to earn a Drop.

Use the keyboard to rotate the Gems, and move them over so that the colors line up. They can line up horizontally, vertically, or diagonally. When they line up, they clear and the Gems above them fall in their place. Now those may clear too. You will see some incredible chain reactions if you place the Gems just right.

Each level has a different Threshold, which you can see at the top right of the screen. Each level also has a Not Threshold, which lets you know how many Gems to line up to earn a Not.

Not's let you use special effects. These help clear Gems that are on the board.

When you've earned enough Drops, you can advance to the next level. There are 100 levels in all. (Don't forget to look for the secret password.)

Keyboard Controls

Saving and Loading

We certainly don't expect you to sit down and play 100 levels start to finish. So any time during the game, you can save by simply going up to the Game menu and selecting Save.

Loading is similar, select Load from the Game menu and continue where you left off.

There is also a feature called "Quick-Save."

If you exit Gemstorm during play, you will be asked if you would like to Quick-Save your game. The next time Gemstorm loads, you will be asked if you want to continue the Quick-Saved game. Selecting "no" will still let you continue the Quick-Saved game next time.

Scoring

- Scoring

- You earn 10 points for every Gem you clear.

- In a chain reaction you earn 10 points for every Gem times the level of the chain reaction.

- You lose 1 point for every Gem left on the board when you finish the level.

You earn a "Drop" when you line up enough Gems of the same color in a row.

"Threshold" is the number of Gems you must place in a row for them to clear. (i.e. a Drop.)

"Not Threshold" is the number of Gems you must place in a row for you to earn a Not.

A "Not" allows you to use Special Effects. The better the special effect, the more Nots are required. You can see the Nots you earn stack up at both sides of the board.

Each "level" has a specific goal: To earn a certain number of Drops. And on each level you must also earn a certain type of Drop. There are 100 levels in all.

There are six "Special Effects" that help you during play. As you earn Nots, you can see the effects appear at the right side of the board.

Hidden in Gemstorm is a secret password that will let you do something special. Numerous hints are also hidden to help you find it. You can enter the password on the Title Screen, and then watch what happens.

Menus
