

Pyro's Roulette

While creating a suite of gambling games for Windows, I noticed that there weren't a whole bunch of Roulette games available, and those that were lacked the visually exciting elements of the real game. This version was written to remedy this situation!

Pyro's Roulette has some of the finest animation and visuals of any game for Windows. Best of all, it's **cheap!**

System Requirements: Roulette requires an IBM PC or compatible and Window 3.1 or greater. A sound Card capable of playing MIDI files and WAVE files is optional but highly recommended.

To install Pyro's Roulette: Create a directory or subdirectory on your computer. Copy or move all of the included files into this directory. If you have other games by PyroWare, **it is highly recommended that you place them in the same directory!**

To RUN the game: Double-click or RUN PYROULET.EXE.

Creating a bank account and getting CASH: When the game is first run, the ATM machine appears. Click on the ATM card. The machine will prompt you for your name. Enter your name with the keyboard, and press ENTER. Now, to get gambling cash, click the WITHDRAW button on the ATM. Enter the desired amount, and select ENTER. The ATM machine will dispense cash and return you to Pyro's Roulette.

Placing a bet: Click on one of the stacks of chips in the center of the chip rail, below your printed cash. The mouse pointer will turn into a chip. Click this chip wherever you want on the playing field. The bet will be made in that amount.

Removing a bet: Click on the bet with the RIGHT mouse button.

Dropping the "ball": It's automatic! If you neither bet (or modify existing bets) for *six* seconds, the dealer will drop the ball.

Winnings remain on the layout. You must remove them with the right mouse button, or they will ride!

REGISTERING: The game will play for 10 days without interruption. After 10 days, you will be reminded to register. I think you'll know within 5 minutes that this game is one of the easiest and most visually appealing casino games available. Best of all, registration is only \$5. Here's how.

Get \$5 (that's a measly 5 bucks) to me at:

**PyroWare
1109 Manor Way
Roanoke, TX 76262**

PyroWare phone: (817) 431-0751. E-Mail PyroWare@AOL.COM

Internet Address: <http://users.aol.com/PyroWare>

Along with the \$5, I need your Name of at least 5 characters, and your postal address or E-Mail address. I will mail to you a secret code which, paired with your name, unlocks this game permanently. If you need a diskette, I must ask \$8. Funds must be check, cash, money order, for US dollars drawn on a US bank (sorry Canadian friends). I think you will agree this game is worth 5 bucks.

Once you have received your registration code from PyroWare, you can permanently license your copy by entering your name and code in the REGISTER NOW! window.

ShareWare vendors must abide by the rules as outlined in the HELP file.

Visit our Home Page on the Internet

Come see us at: **<http://users.aol.com/PyroWare>**

Along with descriptions of all PyroWare games you will find a download library with the latest versions available. If you register a game, your registration will be effective indefinitely. Future improvements are available here for your download, and will be automatically registered to you.

All of the games available are automatically integrated under one bank account when installed to your hard disk drive. For example, let's say you first play BlackJack, and win \$255. When you exit BlackJack, and crank up Craps, you will still have \$255. It simulates leaving the BlackJack tables, and hitting the Craps table. If you go bust in any game, you must visit the ATM machine, access your account, and continue play.

This creates a seamless Virtual Casino, all games being under "the same roof", and allows you to practice important money management techniques.

These games include:

Craps - The finest Craps simulation, period, with over three years in development and many, many improvements. The standard for Window's Craps.

Roulette - A visually appealing Roulette game, with all the widgets. 3D chip stacks make this game really playable.

Double-Down Poker - You've tried other Poker games, now try the best, with a unique double-down feature. This one game plays like four... you can have either a dollar or quarter game, Jacks or better, or the double-down machine.

BlackJack - A superior BlackJack simulation, allowing up to five hands simultaneously, along with a very cool background, chips, everything necessary for a great game.

Thank you!
